

At Wolfspeed, our purpose extends beyond our products. We are committed to making the electrification of everything more possible, more efficient, and more sustainable for billions to live better lives. The achievement of the prestigious LEED Silver® certification at our Mohawk Valley facility, the world's first, largest, and only 200mm silicon carbide fab, is a testament to our dedication to sustainability and environmental stewardship, and

demonstrates our ability to deliver on our commitments. The fab, administrative building, and central utilities building (CUB) located in Marcy, New York, have been awarded the LEED Silver® certification. We're delivering unparalleled reliability and efficiency on a massive scale to power the most disruptive innovations to make the world better, faster, greener, and more sustainable. *We have the power to make it real, today.*

Key Sustainability Features Include:

14
EV stations enabling the
reduction of
136,200+ lbs
of carbon emissions from
cars annually

100%
energy efficient LED lighting
lasting 25x longer and
reducing energy use by 75%
compared to incandescent bulbs

Constructed wetland/ bioretention ponds to **naturally manage stormwater runoff and improve the water balance** of the site

Up to
33%

of all process water from the semiconductor fabrication process is **recycled**

Constructed with materials using lower VOC concentrations including paints, coatings, sealants, adhesives, furniture and flooring to **improve indoor air quality**
