CEO MESSAGE

Dear Stakeholders,

As we present our 2026 Corporate Sustainability Report, we reaffirm a vision that has long guided Wolfspeed—developing and manufacturing products that enable a more sustainable future. This vision remains at the core of who we are, shaping how we innovate, operate, and partner across a rapidly evolving global landscape.

Over the past year, we have made meaningful progress in strengthening our foundation. With new leadership and an evolved organizational structure, we have refined our strategic direction to better position Wolfspeed for long-term growth and resilience. As we look ahead, our focus remains clear: strengthening our financial foundation, accelerating technology leadership, and driving operational excellence to deliver value for all stakeholders.

Advancing Our Business and Technology

In 2025, we expanded both our reach and our capabilities. We continue to diversify our customer base and go-to-market strategy across key sectors, including automotive, industrial, and energy, with a focus on supporting the growth of AI data centers while advancing product innovation design to deliver highly energy-efficient solutions that enable renewable technologies and help protect our environment and natural resources. In parallel, we have broadened our product portfolio to better meet the evolving needs of our customers and the markets we serve.

A key milestone in advancing our innovation was our transition to 200mm wafer fabrication technology. This shift not only enhances manufacturing efficiency but also reduces overall greenhouse gas process emissions, underscoring how our technology leadership directly supports environmental progress.

Driving Sustainability Through Action

Our commitment to sustainability continues to guide our operations and decision-making. In 2025, we made measurable progress across several key areas:

Reducing Environmental Impact

On the environmental front, we increased our recycled water usage by an additional 8% through the expansion of recycling systems and improved utilization of existing infrastructure. We also completed carbon footprint assessments for selected products, advancing our understanding of product-level impacts and enabling more informed decisions moving forward.

Supporting Our People and Communities

Protecting our people remains a top priority. Through our Protect the Pack initiative, we reduced our total recordable work-related injury and ill health rate by 30% year over year. A key driver of this progress has been our EHS Observations portal, which continues to strengthen our safety culture. We encourage employees to speak up, knowing their input is valued and acted upon—resulting in targeted improvements, enhanced training, and a safer workplace for all.

We achieved our goal of establishing STEM partnerships across 100% of our major locations, including collaboration with FIRST Robotics and the Boys and Girls Club. We also made meaningful investments in strengthening our leadership capabilities, recognizing that effective, inclusive leaders are critical to our long-term success. These efforts reinforce a culture where employees feel heard, supported and aligned, enabling both our people and our business to thrive.

Strengthening Governance and Resilience

We continue to improve resilience while strengthening partnerships with suppliers who share our values. This year, we achieved our goal of sourcing more than 5% of eligible supply spend from small and local suppliers—supporting economic growth in the communities where we operate while diversifying our supply base.

Looking Ahead

As we move forward, we are energized by the progress we have made and the opportunities ahead. Our refined vision, strengthened leadership, and continued focus on innovation and sustainability position Wolfspeed to be a leader in delivering solutions that power a more efficient and sustainable world.

I invite you to explore the full report to learn more about our achievements and the actions we are taking to drive lasting impact. Thank you for your continued support and partnership as we build the future together.

Sincerely,

Robert Feurle

WHO WE ARE

At Wolfspeed, we are the creators of the advanced semiconductor technology that powers the world’s most disruptive innovations. In other words, it’s our job to make humankind’s greatest ambitions – real.

For us, making it real means making it the Wolfspeed way. By delivering unparalleled reliability on a massive scale, electrifying everything by building the first fully integrated silicon carbide corridor with end-to-end substrate and power device fabrication, fulfilling our world’s growing demand.

Our solutions, including silicon carbide material, Power Modules, Discrete Power Devices and Power Die Products, are targeted for various applications. Helping make cars, planes, ships, renewables, and everything in between, better, faster, greener, cooler, and more sustainable for billions to live better lives.

So bring us your what-ifs. Those never-been-done-befores. We will bring you **The Power to Make it Real™**.

Wolfspeed’s Products and Applications

Products

Silicon Carbide Power Products: Discrete power devices (Schottky diodes, MOSFETs) and Power Modules
Silicon Carbide Power Bare Die Products: MOSFET and Schottky diode devices in die form
Gallium Nitride on Silicon Carbide: MMICs, HEMTS

Applications

Automotive: Electric Vehicles (EVs), EV Fast Charging
Industrial: Power Supplies, Test and Production Equipment, Motor and Motion Control, Industrial E-Mobility
Renewable Energy: Residential and Commercial Solar, Energy Storage Systems
High Voltage: AI Data Centers, Mining, Critical Power Systems

Industry Awards and Recognition

- **Sungrow Above & Beyond Award**
- **EE Awards Asia’s Best Automotive Platform Award:** 1200V SiC MOSFETs
- **Expert Talk Annual Product Excellence Award:** 1200V SiC MOSFETs
- **21dianyuan SiC Industry Excellence Award – Power Devices:** 1200V SiC MOSFETs

OUR VALUES

Our values are a simple, yet powerful reflection of how we interact with each other, our customers, our partners and our communities. We strive to live by these values every day. They reflect not only our great history of disruptive innovation but also set the tone for the exciting future ahead. We do amazing things in a human way. For example, our Values in Action program allows employees to say thank you and recognize their peers for going above and beyond. It’s just one small way our values are embedded in our work and focused on our people.

Safety, Integrity and Respect

We value our people above all else. Their safety is primary in every decision we make. We always act with integrity and respect for our people, workplace and community. Relationships matter. We value everyone’s contribution and an environment of spirited and open debate.

We do the right thing, and we say, “Thank You.”

Ownership and Accountability

We are accountable to each other and committed to the highest standards of safety, quality, work and behavior.

We succeed or fail together.

Ingenuity and Passion

Our passion for making the world better through innovation means we take risks and question conventional thinking, developing new technologies and ways of doing business—leading the way, every single day.

We do what others say can’t be done.

WHY WOLFSPEED

As the world shifts away from internal combustion and fossil fuel power to address climate change, there is a huge race on to find cleaner, more efficient, and more sustainable energy – not just in small, discrete applications, but at global scale.

We call this race the “electrification of everything,” and it’s moving quickly from concept to reality. Silicon carbide is at the core of this transition. This revolutionary semiconductor material is propelling us into a future of immense possibilities - a future where energy efficiency,

sustainability, and technological advancements converge.

The current demand for silicon carbide is insatiable and the opportunity for it to scale into the future is unstoppable.

WolfSpeed is the largest company in the world with a sole focus on silicon carbide.

We have a lot of firsts and a lot of history.

- FIRST** — **600V, 1200V, and 1700V SiC JBS Schottky Diodes**
- FIRST** — **1200V SiC MOSFET**
- FIRST** — **Commercially available 10,000V MOSFET**
- FIRST** — **300mm single-crystal SiC wafer**

Today we produce 20% of the world’s silicon carbide supply and have produced most of all the silicon carbide ever made. Our devices have logged more than 10 trillion hours of service in the field.

We believe this success is based on a one company, one business unit, with 100% focus on SiC.

WolfSpeed is the best possible candidate to lead the market – and the electrification of everything. **Here’s why:**

- Investment** — New 200mm wafer fabs are already giving the market the precious supply of silicon carbide it needs, but each new fab costs billions of dollars in investments as well as deep engineering expertise.
- Supply** — As new markets for silicon carbide quickly ramp up, companies will need highly reliable sources of the highest-quality SiC chips – ideally a company that supplies other chipmakers with their silicon carbide.
- Focus** — Taking the leadership reins in the silicon carbide market demands unshakable focus. Trying to produce both silicon AND silicon carbide can become a distraction and a funding drain for silicon carbide advances.
- Expertise** — The more learning cycles a company has, the greater its application knowledge and insight.
- Persistence** — Persistently pursuing continual improvement in our products and process.

SCALABLE CAPACITY FOR SILICON CARBIDE

The demand for silicon carbide is growing. Countries, states, and municipalities around the world are setting strict carbon emission standards, enacting new energy efficiency standards and investing in cleaner energy programs. The electrification of everything is underway, and silicon carbide is an essential resource in its success.

Wolfspeed is *ramped & ready* to deliver.

The John Palmour Manufacturing Center

This state-of-the-art silicon carbide wafer facility will:

- Increase Wolfspeed materials capacity by 10x
- Focus on 200 mm wafers
- Be highly-automated
- Cover more than 185,806 m² (2 million ft²)

Mohawk Valley Fab

First and largest 200mm silicon carbide power fab:

- LEED® Silver certified energy efficient campus
- Fully automated “lights-out” fab
- Site spans 220,000 m² (55 acres)
- Building is more than 46,451 m² (484,000 ft²)
- 11,148 m² (120,000 ft²) of clean room space

Expanding with the Environment in Mind

In addition to focusing on the health and wellness of our employees through ergonomics programs and other design features to enhance building occupancy, we are planning the following environmental features for The John Palmour Manufacturing Center for Silicon Carbide in Siler City, North Carolina:

Building Efficiency

Being LEED certified for building efficiency, including energy, water and waste savings

Designing all the buildings and facilities systems to reduce the amounts of water and chemicals used over what is currently being done in our facility in Durham, North Carolina

Having a white reflective roof to reduce heat island effect

Energy / Emissions

Reducing embodied carbon of steel and concrete to minimize construction emissions

Installing solar PV for use of renewable energy

Installing electric vehicle charging stations in parking lots to support gas-free transportation

Enhancing indoor air quality by minimizing contaminants and selecting low VOC emitting materials

Water

Deploying process water recycling and conservation efforts, such as collecting rainwater for water re-use

Landscaping with low water needs, stormwater quality control with swales and basins to control the quantity and quality of stormwater runoff

Waste

Diverting construction waste to reduce waste going to the landfill

Re-purposing on-site material for structural fill

SUSTAINABILITY MISSION AND PRINCIPLES

Our Sustainability Mission

Our purpose extends beyond our products. Our business is built on the power of silicon carbide and the innovative possibilities unleashed by this technology. Always at the forefront of technology revolutions, we serve as a catalyst for driving change that transforms our communities, industries, and our world by powering more while consuming less.

We are Wolfspeed.

The best for our employees, our environment, and our communities

People First, People Always

Responsible Business Practices,
Innovating for a Better Future

Processes that Protect the
Environment, Products that
Improve it

Absolute Commitment to Integrity
and Transparency

Our Sustainability Principles

At Wolfspeed, we prioritize the health and well-being of our communities.

To fulfill this responsibility, we adhere to rigorous guidelines for material sourcing, supplier selection, and employee safety. Additionally, we actively support community engagement and educational initiatives.

Our aim is to minimize resource usage and lessen the environmental footprint of our operations.

We are dedicated to managing environmental impacts responsibly. This includes, at a minimum, complying with environmental regulations and continued improvement of our environmental performance. Our objectives for product sustainability are straightforward. We strive to empower our customers to create power and wireless systems that contribute to a responsible, energy-efficient future.

We are committed to managing our products responsibly from inception to disposal.

As we spearhead the innovation and commercialization of silicon carbide, we aim to ensure that our products are managed in a sustainable manner throughout their lifecycle.

We strictly adhere to the guidelines set forth in our [Code of Conduct](#).

Furthermore, we hold our suppliers to the same high standards. We require them to comply with stringent social and environmental standards, as detailed in our [Supplier Code of Conduct](#).

We relentlessly pursue disruptive technologies that have the potential to transform industries.

We are committed to operating at the highest ethical standards. Our proactive approach to risk management, both within and outside our organization, is designed to support our long-term financial performance.

Our Board of Directors sets high standards for our employees, officers and directors.

We are committed to the transparency of our environmental, social and governance information and data.

SUSTAINABILITY GOALS

We are committed to responsible business practices and sustainability. Our corporate-wide goals drive our efforts, aligning with our structure, competencies, and culture across business units and global locations.

Several of our sustainability goals concluded at the end of the reporting period. We are currently evaluating the next generation of objectives to guide our continued sustainability journey.

^[1] Expansion sites will be evaluated for applicability.

^[2] We also established a long- term goal of reducing scope 1 and 2 emissions in line with the Paris Agreement to further reduce our climate impact in support of limiting warming to 1.5°C and transitioning to a net-zero carbon economy.

^[3] Non-hazardous solid waste

^[4] Purchased Quality Item (PQI) suppliers

^[5] Applicable to relevant surveys for Wolfspeed (climate change, water security, supplier engagement).

		Our Ambition	Our Goal	2025 Progress
People First, People Always	Health & Safety	Providing a safe and healthy work environment is paramount to our success and protects our most valuable resource: our employees.	Establish a certified Occupational Health & Safety Management System for 100% of our manufacturing sites by 2025 ¹ .	● Learn more >
	Community	Provide more opportunities for STEM education, at all levels.	Establish STEM partnerships at 100% of our major locations by 2025.	● Learn more >
Processes that Protect the Environment, Products that Improve It	Greenhouse Gases	Actively work to mitigate climate change and reduce our own --and others' -- carbon footprint; stay efficient, stay productive. Be a company that makes a difference for future generations.	• Reduce scope 1 and 2 greenhouse gas (GHG) emissions by 50% by 2030. • Achieve net zero scope 1 and 2 GHG emissions by 2050².	● Learn more >
	Water	Enable sustainable and efficient use of water across all sectors. Be a company that actively addresses water scarcity.	Increase our water recycling rate by 25% by 2025.	● Learn more >
	Waste	Be a company that strives for zero waste through waste reduction and recycling.	Achieve 85% waste diversion rate from landfills by 2025 ³ .	● Learn more >
Responsible Business Practices, Innovating for a Better Future	Supply Chain	Assess our suppliers on social and environmental risks to strengthen partnerships with those with best practices.	Evaluate ESG risks and opportunities for 100% ⁴ of suppliers on our Approved Supplier List by 2025.	● Learn more >
	Supply Chain	Improve resilience across our supply chain.	Achieve >5% eligible supply chain spend from small and/or local suppliers by 2025.	● Learn more >
Absolute Commitment to Integrity and Transparency	Risk Management	Use a defined method to identify and evaluate our organizational risks.	Complete three risk plans per year under our Enterprise Risk Management (ERM) program by 2025.	● Learn more >
	Transparency	Actively and continually work to improve our disclosures and ratings through major reporting frameworks to drive continuous improvement efforts.	Achieve a score of B or better on all CDP surveys by 2025 ⁵ .	● Learn more >

2025 SUSTAINABILITY ACHIEVEMENTS

Increased amount of recycled water by additional

8%

(from 150 to 162 million gallons)

Hosted our Annual STEM Day Event with

100%

of feedback indicating participants would recommend the event to a peer

Achieved our goal of establishing STEM partnerships across

100%

of our major locations.

Announced the commercial launch of 200mm carbide materials portfolio, improving MOSFET yields

Completed carbon footprint assessment of selected products

Reduced overall recordable work-related injuries and ill health rate by

30%

(from 1.31 to 0.91)

SUSTAINABILITY REPORTING

Wolfspeed’s 2026 Sustainability Report highlights our comprehensive approach to environmental, social, and governance (ESG) reporting and transparency. We align with leading global frameworks including the Global Reporting Initiative (GRI) Standards, Sustainability Accounting Standards Board (SASB), Task Force on Climate-related Financial Disclosures (TCFD), and United Nations Sustainable Development Goals (UN SDGs). Our reporting methodology incorporates health and safety guidance from the Center for Safety & Health Sustainability, with content development guided by a thorough materiality assessment process.

To enable data accuracy and credibility, we engage an independent third party for limited assurance verification of select sustainability metrics, with the full [Independent Assurance Statement](#) available in the report’s appendix.

The majority of our data is reported on a calendar year basis (January-December), while financial data follows our fiscal year (July-June). We maintain an annual reporting cycle with regular updates available at [wolfspeed.com](#) sustainability pages.

For inquiries or feedback, stakeholders can contact us at:
[#Wolfspeed_Sustainability@wolfspeed.com](#)

Our Ambition

Actively and continually work to improve our disclosures and ratings through major reporting frameworks to drive continuous improvement efforts.

Our Goal

Achieve a score of B or better on all CDP surveys by 2025*

2025 Progress

Achieved B on the CDP Climate Change, CDP Water Security and CDP Supplier Engagement surveys.

*Applicable to relevant surveys for Wolfspeed (climate change, water security, supplier engagement).

CDP

CDP is a global disclosure system of self-reported environmental data.

In 2016, we disclosed our company-wide GHG emissions and climate change risks and opportunities to CDP for the first time. In 2020, we disclosed our company-wide water inventory and water risks and opportunities to CDP for the first time. We will continue calculating our GHG emissions and tracking our water data in the future because measuring this data helps us recognize and work toward lowering our environmental impact. Visit [cdp.net](#) or our [Sustainability Reporting page](#) to view our responses to the CDP Climate Change Survey and CDP Water Security Survey, including supply chain modules.

Why Wolfspeed reports to CDP?

Transparency and Accountability:	By disclosing our environmental data, we demonstrate transparency and accountability to stakeholders, including investors, customers, and the public. This openness fosters trust and helps build our reputation.
Risk Management:	Reporting to CDP allows Wolfspeed to assess and manage environmental risks. Understanding climate-related risks, water scarcity, and other sustainability challenges enables proactive mitigation strategies.
Investor Expectations:	Many investors now consider environmental performance when making investment decisions. Reporting to CDP aligns with our investor expectations and helps Wolfspeed attract responsible investment.
Benchmarking and Improvement:	CDP provides a standardized framework for comparing performance across industries. We can benchmark ourselves against peers and identify areas for improvement.
Innovation and Efficiency:	Environmental reporting encourages innovation. We are constantly seeking efficiency gains and often discover new ways to reduce emissions, conserve resources, and enhance sustainability through our data analysis and reporting.
Supply Chain Engagement:	CDP’s supply chain modules encourage companies to engage with suppliers on sustainability. This collaboration is driving positive environmental practices throughout our value chain.

MATERIALITY ASSESSMENT

At Wolfspeed, we strive to identify the most relevant environmental, social, economic, governance and product topics. To achieve this, we conduct a comprehensive materiality assessment. Here’s how we approach it:

- Understanding Context:** We delve into Wolfspeed’s context to grasp the intricacies of our operations and industry landscape.
- Impact Identification:** We identify both actual and potential impacts associated with our activities.
- Assessing Significance:** We evaluate the significance of these impacts to prioritize topics.
- Material Topics Determination:** Based on this assessment, we determine the material topics crucial for effective decision-making.

The result? We ranked material topics and categorized them as Very Important, Moderately Important, or Slightly Important. This approach allows that our reporting reflects the most impactful aspects of our operations.

Our materiality matrix highlights the significance of various topics to our stakeholders based on insights from our stakeholder survey. It also reflects the impact of these topics on Wolfspeed by considering current sustainability issues, competitor material topics, industry best practices and leadership perspectives.

Material topics in the Very Important category are the topics that Wolfspeed needs to focus on which could have a significant impact on the company’s sustainability performance.

Some identified topics that are not considered material are still being addressed and reported in the Sustainability Report since Wolfspeed views them as significant.

Even though Wolfspeed hasn’t completed official double materiality yet, our materiality assessment includes both (1) our impacts on natural and human resources (impact materiality) by following Global Reporting Initiative’s guidance to determine and disclose material topics; and (2) our disclosure of sustainability matters that may impact our cash flows, access to finance or cost of capital (financial materiality) by responding to Sustainability Accounting Standards for Semiconductors.

Environmental	- Waste - Water and effluent - Greenhouse gas emissions
Social	- Occupational health and safety - Abide by all applicable non-discrimination and employment practices
Corporate Governance	- Ethical business practice - Intellectual property security (cyber and data security) - Security practice - Critical incident management
Economic	- Financial performance - Business continuity
Product	- Strengthening product safety and quality - Sustainable supply chain management

UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS: POWERING A SUSTAINABLE FUTURE

Our commitment to the United Nations Sustainable Development Goals (SDGs) goes beyond mere alignment—it’s embedded in our foundational mission to lead the innovation and commercialization of silicon carbide technology. The 2030 Agenda for Sustainable Development, adopted by all United Nations Member States, provides a shared blueprint for peace and prosperity for people and the planet, now and into the future. As a pioneer in semiconductor technology, our contributions to these global goals are both substantial and measurable.

Refer to the [UN SDGs Disclosures](#) section of this report for more information on how the UN SDGs and their specific targets align with our business focus, strategy and material issues.

Our Approach

- At Wolfspeed, we believe everyone should have a roof over their heads, enough to eat and an opportunity to excel. It is impossible for children to achieve at their highest level when they are worried about where they will sleep at night or where their next meal will come from. Working with our community partners to meet their needs helps students focus on achieving their full potential through STEM education programs. This work builds important relationships with our community neighbors with the same spirit of innovation and passion that drives our business. Working closely with our charitable corporate partners, we are able to focus our efforts to help our communities, as well as increase awareness of the opportunities provided through STEM.

Our 2025 Activities

- Since partnering with [FIRST Robotics](#) in 2019, our collaboration has expanded to national and international support. In 2025, FIRST Robotics support was provided in North Carolina (Durham & Chatham), New York (Utica), Arkansas (Fayetteville), and Northern Ireland.
- FIRST Robotics Class Packs provided to The Daniel Center in Raleigh and Boys & Girls Club of Central Carolina.
- Cultivated relationship with the Boys and Girls Club in Siler City and sponsored the hiring and retention for the location’s new Club Program Director position.

Our Goals and Certifications

- We have a [sustainability goal](#) to promote STEM education opportunities in the communities in which we operate:
Establish STEM partnerships at 100% of our major locations by 2025

Our Approach

- At Wolfspeed, we believe providing a safe work environment is the most fundamentally important thing that we do for our employees and partners. Their safety, health and overall wellbeing has been, and will continue to be, our top value. Our occupational health and safety programs to enable the safety of our workplace through evaluation and prevention measures. Wolfspeed supports the well-being of our employees through programs that encourage a healthy lifestyle. We are committed to offering benefits to employees and their families to assist in improving health and lifestyle choices. Programs throughout our operations are tailored to the needs of the employees in the region and include many health-related benefits. We also have programs for our employees’ mental health including employee assistance programs and our Mental Health Allies Employee Resource Group.

Our 2025 Activities

We launched the **EHSS Observations** app at all of our locations – an innovative tool that empowers all Wolfspeed employees to actively participate in maintaining a safe and compliant workplace and protect the environment.

- We implemented automation of EHS training assignments in our Learning Management System (LMS) which ensures employees are assigned the correct EHS training for their work location, job role, and hazards in the work area when they are onboarded and when they change job assignments.

Our Goals and Certifications

- We maintained Occupational Health and Safety Management System **ISO45001:2018** in our manufacturing locations in North Carolina.
- We have a **sustainability goal** to further support the health and safety of our employees:

Establish a certified Occupational Health & Safety Management System for 100% of our manufacturing sites by 2025¹

Our Approach

- At Wolfspeed, we strive to implement best management practices that conserve and recycle water and prevent and reduce water pollution. With our automotive-qualified 200mm wafer fabrication facility in Marcy, NY, complemented by our materials factory at our Durham, NC headquarters, and materials manufacturing facility in Siler City, NC, we remain dependent on water availability and anticipate our total water dependency to increase in the future. We continuously explore options for water recycling improvements to help offset the expected increase in water withdrawals as we expand. Wolfspeed’s new construction is being designed to be LEED certified.

Our 2025 Activities

- We increased the amount of recycled water by 12 million gallons by adding new water recycle systems and expanding the use of existing ones.
- Our water-focused sustainability team continued to meet regularly to drive Wolfspeed’s **water conservation and recycle efforts**.

Our Goals and Certifications

- We maintained Environmental Management System **ISO 14001:2015** in our manufacturing locations in North Carolina.
- We have the following **sustainability goals** to further reduce our water-related impacts and increase the transparency of our water-related risks and opportunities:

Increase water recycle rate by 25% by 2025
Achieve a score of B or better on all CDP surveys by 2025⁴

Our Approach

- We’re leading the transformation from silicon to silicon carbide as we shape the future of semiconductor markets: the transition to electric vehicles, the evolution of renewable energy and energy storage, and the advancement of industrial applications. After more than 35 years of forging new technology adoption and transformation, our Wolfspeed Power semiconductors are leading the industry through unrivaled expertise and capacity.

Our 2025 Activities

- We continued ramping up production in our silicon carbide power fab facility in [Marcy, New York](#).
- We introduced a [2300 V silicon carbide Wolfspeed WolfPACK™ power module](#) to help customers maximize the benefits of silicon carbide
- We completed the transition to a fully 200mm platform, accelerating scalable high-volume SiC manufacturing.

Our Goals and Certifications

- Our [scalable capacity plans](#) include working toward increasing silicon carbide wafer fabrication capacity and materials production to meet market demand for these technologies.
- Depending on the facility, our manufacturing operations are certified to [ISO 14001:2015](#), [ISO 9001: 2015](#), [IATF 16949: 2016](#), and/or [AS 9100D](#).

Our Approach

- Wolfspeed is committed to creating a safe workplace that fosters a culture where employees can be their authentic self. We celebrate our employees’ authenticity and understand that diverse ideas, perspectives, thinking styles, and backgrounds lead to higher-quality decisions and enable us to solve problems that other companies consider impossible. We are also committed to building the communities in which we operate. We partner with municipalities, civic organizations, and advocacy groups to help support our community is one that thrives on opportunity. We believe in adequate resources and support so that all are free to pursue and achieve a productive, fulfilling life.

Our 2025 Activities

- We continued our strong partnership with the [Boys and Girls Club in Siler City](#) to empower local youth through a three-year sponsorship of a Club Program Director, facility improvements by volunteers, participation in STEM activities, and board membership by Adam Milton, SVP of Global Manufacturing Operations. These initiatives positively impact the Siler City community.
- We hosted Winter Donation Drives at four of our main locations. North Carolina partnered with Military Missions in Action (MMIA) and the Boys and Girls Club of Siler City, Fayetteville partnered with Northwest Arkansas Children Shelter, and Mohawk Valley partnered with the Neighborhood Center.

Our Goals and Certifications

- We have a [sustainability goal](#) to improve resilience in our supply chain:
Achieve >5% eligible supply chain spend from small and/or local suppliers by 2025.

Our Approach

- At Wolfsp speed, we strive to reduce the overall impacts of our manufacturing processes, including substituting sustainable resources in place of non-renewable resources, reusing or recycling materials wherever technically possible and economically reasonable, and minimizing waste and disposing of waste safely and responsibly.

Our 2025 Activities

- Our manufacturing operations continued to evaluate and optimize processes to minimize chemical usage without negatively impacting product quality and have reduced the amount of chemicals required in some processes.
- We continued looking into opportunities to reduce, reuse and recycle our waste.

Our Goals and Certifications

- We maintained Environmental Management System [ISO 14001:2015](#) in our manufacturing locations in North Carolina.
- We have the following [sustainability goals](#) to further reduce our waste and water-related impacts:

Increase water recycle rate by 25% by 2025
Achieve 85% waste diversion rate from landfills by 2025²

Our Approach

- Wolfsp speed was founded upon the premise that our silicon carbide technology could fundamentally change the efficiency of energy use around the world. Our mission is to lead the innovation and commercialization of silicon carbide, liberating designers to invent power systems for a responsible, energy-efficient future. We have always focused our priorities on improving the energy efficiency of our products, which in turn have a lower impact on the environment and to climate change. In addition to providing energy-efficient products, we strive to reduce GHG emissions and improve energy efficiency at all Wolfsp speed sites.

Our 2025 Activities

- Our Power products sold in 2025 will save approximately 114 million MWh and 49 million metric tons CO2e over their estimated lifetimes compared to alternative products (e.g., silicon Power products). This is equivalent to the greenhouse gas emissions from over 11 million gasoline-powered passenger vehicles driven for one year.
- We operated [point-of-use abatement](#) and optimized fuel usage to reduce GHG emissions at our manufacturing facility in Marcy, NY.
- We reduced usage of high global warming potential gas from our processes throughout the year.
- We transitioned to 200mm wafer fabrication technology with higher efficiency and lower overall GHG process emissions.

Our Goals and Certifications

- We maintained Environmental Management System [ISO 14001:2015](#) in our manufacturing locations in North Carolina.
- We have the following [sustainability goals](#) to further reduce our GHG and climate-related impacts:

Reduce scope 1 and 2 GHG emissions by 50% by 2030
Achieve net zero scope 1 and 2 GHG emissions by 2050³
Achieve a score of B or better on all CDP surveys by 2025⁴

^[1] Expansion sites will be evaluated for applicability.

^[2] Non-hazardous solid waste

^[3] We also established a long- term goal of reducing scope 1 and 2 emissions in line with the Paris Agreement to further reduce our climate impact in support of limiting warming to 1.5°C and transitioning to a net-zero carbon economy.

^[4] Applicable to relevant surveys for Wolfsp speed (climate change, water security, supplier engagement).

ABSOLUTE COMMITMENT TO INTEGRITY AND TRANSPARENCY

Our Board of Directors sets high standards for our employees, officers, and directors. We are committed to the transparency of our sustainability information and data.

CORPORATE GOVERNANCE

At the core of our sustainability philosophy is the significance of strong corporate governance. The Board of Directors has a duty to act as a responsible fiduciary for shareholders and to oversee our business management. To fulfill these responsibilities, the Board of Directors follows the procedures and standards outlined in these guidelines. These guidelines may be updated periodically as the Board of Directors sees fit in the best interests of Wolfspeed or to comply with relevant laws and regulations.

BOARD OF DIRECTORS AND COMMITTEE COMPOSITION

Our Board of Directors plays a critical role in our operations and vision. Our Board of Directors is the ultimate authority over the Company, and its members are selected based on their significant executive experience. Our Board of Directors meets quarterly at a minimum to review topics such as corporate strategy, product development, finances, and operations, among other relevant corporate matters. Directors also serve on different Board Committees as detailed in the table below. More information about our Board of Directors can be found on our [Board of Directors](#) and [Committee Composition](#) pages at [wolfspeed.com](#).

CODE OF CONDUCT

Our Code of Conduct applies to every Wolfspeed employee around the world, including our Board of Directors, and governs every business decision we make. Our values are at the core of our success and the Code of Conduct embodies and reinforces our commitment to act in a manner consistent with our values and put them into practice every day. Our [Code of Conduct](#) is available at [wolfspeed.com](#).

Our Code of Conduct reflects our commitment to integrity and describes standards of conduct for our employees and directors. Our executive officers and other senior financial personnel are also subject to additional policies stated in the [Code of Ethics for Executive Officers and Other Senior Financial Personnel](#). This includes Code of Conduct and supporting internal Company policies. Our Code of Conduct contains our guidelines for ethical business practices, including how employees can report breaches of Wolfspeed policies and details on the Compliance Hotline.

Anti-corruption is included in our Code of Conduct, our Antitrust, Anti-Corruption, Anti-Bribery, and Anti-Money Laundering policy and associated training. These apply to all Wolfspeed operations, as do specific policies intended to ensure compliance with the Foreign Corrupt Practice Act (FCPA) in the United States and all such other applicable anti-corruption statutes and regulations. Our Code of Conduct contains our guidelines for ethical business practices, including bribery and corruption.

Human rights guidelines are outlined in our Code of Conduct and our [Human Rights Policy](#). Annually, employees are required to undergo Code of Conduct and general policy training. Employees are required to complete and acknowledge a number of compliance courses. The course topics vary from year to year, but regularly include anti-corruption and human rights-related subject matter and those required under applicable law. Training topics are assigned to employees based on their role within the Company and their work location.

POLICIES

At Wolfspeed, we L.E.A.D, with Environment, Health and Safety and we W.I.N., with Quality as part of our [Protect the Pack](#) culture.

Wolfspeed endorses and adheres to Environment, Health and Safety global standards for all sites and locations. To enable Wolfspeed to implement such standards, we are committed through our Environment, Health and Safety Policy to:

- providing a safe and healthy work environment for our employees;
- complying with regulatory and other requirements;
- reducing our environmental impacts (e.g., carbon footprint, wastewater and waste generation) from cradle to grave;
- implementing specific measures to eliminate hazards and reduce risks to humans and the environment, including pollution prevention;
- adhering to documented procedures for defining the process of establishing environmental, health and safety objectives, targets, and programs or projects;
- improving continually to enhance environmental, health, and safety performance; and
- consulting with and encouraging the participation of workers and workers’ representatives, as applicable.

L.E.A.D. WITH EHS

In an effort to ensure the best for our employees, our environment and our community, we all must L.E.A.D.

- L

LEADERS place continual emphasis on environment, health and safety
- E

EMPLOYEES participate in developing, maintaining and following EHS policies and procedures
- A

ACCEPT accountability for EHS performance
- D

DEMONSTRATE our commitment to legal requirements, risk management and continual improvement

W.I.N. WITH QUALITY

Every employee is responsible for supporting the highest level of Quality in our products and services to achieve customer satisfaction and meet applicable requirements.

We achieve this through our Quality Policy:

- W

WORK TRANSPARENTLY with our customers; listen, understand and exceed customer expectations
- I

INNOVATE AND CONTINUOUSLY IMPROVE our products, processes, and services
- N

NEVER COMPROMISE Quality by always living our values: Safety, Integrity & Respect, Ingenuity & Passion, and Ownership & Accountability

HUMAN RIGHTS

We are committed to our core values, which guide every decision we make and shape how we conduct our business and interact with our customers, partners, suppliers, and communities. We recognize the vital importance of upholding and promoting fundamental human rights grounded in dignity, equality, fairness, and respect throughout our operations and supply chain.

We adhere to applicable laws and regulations and respect internationally recognized human rights standards. Our dedication to advancing human rights is evident in our [Code of Conduct](#), [Supplier Code of Conduct](#), and [Human Rights Policy](#).

Human rights are essential to responsible corporate governance and are integral to our ongoing risk identification and assessment processes. We put our commitment into action by developing and implementing processes, procedures, and tools designed to protect human rights. This involves engaging with stakeholders to understand their perspectives, providing guidance on conducting risk and impact assessments, and continuously refining our efforts to uphold this commitment.

Our future success relies on our collective dedication to operate with integrity and transparency, respect for human rights, and responsibility toward our global customers, partners, and the communities in which we operate. We will continue initiatives aimed at preventing or mitigating any negative impacts on human rights.

We also maintain hiring age restrictions and uphold health and safety standards for all employers and employees of suppliers.

Our [Supplier Code of Conduct](#) explicitly prohibits the use of child labor in violation of local laws and regulations in the countries where Wolfspeed operates. We have established strict standards against forced or compulsory labor, applicable to both the employers and employees of our suppliers. Our Supplier Code of Conduct similarly prohibits such practices by our suppliers.

Both our [Code of Conduct](#) and Supplier Code of Conduct, along with our [Purchase Order Terms and Conditions](#), incorporate human rights clauses. We require all our suppliers to adhere to our Supplier Code of Conduct. Wolfspeed is committed to complying with human rights laws and expects our suppliers and vendors to uphold the same standards.

Through our [Code of Conduct](#), Wolfspeed policies and procedures extend to all subsidiaries.

Our North Carolina operations received Gold-level certification from the Responsible Business Alliance (RBA), which evaluated our human rights policies and practices among other corporate social responsibility factors in 2024. In 2026, Wolfspeed is scheduled to undergo re-assessment of its certification from the RBA.

GLOBAL BUSINESS CONTINUITY & CRISIS MANAGEMENT

Overview

Wolfspeed’s global Business Continuity Management System (BCMS) establishes, implements, operates, monitors, and improves enterprise business continuity. Modeled using industry best-known methods and practices, the BCMS provides a consistent methodology to address potential and realized business disruptions affecting our operations stemming from scenarios including, but not limited to:

						
External products and services disruptions	Labor shortages	Information technology outages and cyberattacks	Natural disasters	Utility and infrastructure disruptions	Fires	Key equipment failures

Application

Wolfspeed takes an all-hazards, risk-based approach to business continuity and crisis management to minimize negative impact on our operations. The BCMS contains structured planning, training, exercising, incident management, and quality monitoring processes. These include, but are not limited to:

					
Business Continuity Plans (BCPs)	Business Impact Analyses (BIAs) for Prioritized Activities	Annual training of key stakeholders and partners	Event Management Teams	Site-specific Risk Assessments	Annual testing and exercising of plans

Forward View

Wolfspeed’s BCMS is well-positioned and supported by top management to allow continued alignment with company growth, industry standards, and customer expectations. It is a vital tool in our effort to ensure organizational resilience for years to come.

RISK MANAGEMENT

Risk management at Wolfspeed is a process undertaken by all functions within the business, including a review of risks related to financial and market performance, operational performance, emergency preparedness and response, environmental health and safety compliance, among other areas. In addition, we have established a formal Enterprise Risk Management (ERM) program to identify, assess, prioritize and manage key enterprise risks. Sustainability-related risks and opportunities are also discussed and addressed as part of this program. Our material business risks are listed in our periodic reports filed with the Securities and Exchange Commission and in our Annual Reports. Our water-related risks can be found in the [Water Management](#) section of this report. Our risks associated with climate change can be found in the [TCFD Disclosures](#) subsections of this report.

Our Ambition

Use a defined method to identify and evaluate our organizational risks

Our Goal

Complete three risk plans per year under our Enterprise Risk Management (ERM) program by 2025

2025 Progress

- Completed annual survey to identify top risks
- Identified Executive Owners and Risk Owners
- Completed tracking for top 5 action plans

The Board, acting itself or through one or more of its committees, has general oversight responsibility for corporate risk management, including oversight of top management’s implementation of risk management practices. While the Board is responsible for risk oversight, senior management is ultimately responsible for assessing and managing our risk exposures. The Board directly oversees senior management’s assessment, mitigation efforts and monitoring of strategic and operational risks, such as those relating to competitive dynamics, market trends and developments in our industry, changes in economic conditions, cybersecurity and sustainability. Senior management regularly updates business plans for each of the Company’s product lines, including an assessment of strategic and operational risks and responses to identified risks, and members of the Board and top management meet annually to review these plans. In addition, top management reports to the Board at each quarterly Board meeting on progress made against these strategic plans, including an update on changes in risk exposure and management’s responses to the changes.

SUSTAINABILITY OVERSIGHT

The Board of Directors is responsible for overseeing management's sustainability efforts at Wolfspeed, with this role primarily led by the [Governance and Nominations Committee](#). This Committee supports the Board in its oversight of environmental, social, and governance (ESG) matters, including issues such as climate change impacts, energy and natural resource conservation, environmental and supply chain sustainability, human rights, employee health, safety, and well-being, as well as corporate charitable and philanthropic activities.

The Committee regularly reports to the full Board, providing guidance on sustainability issues and playing a key role in shaping Wolfspeed's sustainability strategy, including the development of goals and targets. Sustainability-related information covering a variety of topics is presented to the Board at least once a year, or more frequently if significant matters arise. Delivery of this information is facilitated by the Senior Vice President of Legal & General Counsel.

Additionally, management with direct responsibility for developing and monitoring sustainability data at Wolfspeed includes teams from Environment, Health and Safety; Human Resources; Operations; Supply Chain; Product Quality; Legal; Corporate Sales; Marketing; Finance; and Investor Relations.

As part of our ongoing efforts to engage our business leaders, departments, employees, and associates in our sustainable business practices we are progressively incorporating sustainability strategies into our operations and business plans.

Benefits of an Integrated Sustainability Strategy

SECURITY PRACTICES

Wolfspeed Security’s mission is to serve the global organization by protecting Wolfspeed’s people, property and information. Wolfspeed Security is responsible for allowing a safe and secure work environment so that employees can focus on doing

their best work. Leading the organization’s asset protection efforts, Wolfspeed Security employs a risk-informed, collaborative, layered approach which relies on people and technology. The Wolfspeed Security team

includes uniformed officer personnel and a Global Security Operations Center (GSOC) to provide continuous support to the organization.

CYBERSECURITY

Cybersecurity is a key priority at Wolfspeed. Vital to the digital safety of our global operations and the customers we serve, we use a multilayered cybersecurity approach to protect our people, assets, and intellectual property (IP). Everyone at Wolfspeed receives annual training in order to play an active role in mitigating threats and protecting our systems and data.

Active participation in cybersecurity awareness training, adherence to information security policies and procedures, and recognition and reporting of suspicious activities all contribute to the governance and safety of our digital environment.

The Wolfspeed Cybersecurity Team and other business organizations work together to build upon our layered defenses and to fine-tune our existing security controls to achieve more accurate and rapid detection of incidents. The team also performs routine vulnerability testing and security assessments using industry standard frameworks to identify and incrementally improve our capabilities.

Wolfspeed aligns with the best practices and standards developed by the National Institute of Standards and Technology (NIST).

Our Ambition
Protect information and digital assets from threats and vulnerabilities by mitigating information risk.

Our Goal
Ensure the security of our data and systems, and availability of our global operations.

Cybersecurity Lifecycle

Change Management

Wolfspeed manages a proactive and structured change management process to enable changes made to any production environment are applied in a safe, forward-looking and controlled manner. Changes to systems and network devices, along with physical and environment changes, are carefully monitored and managed through a formal change control process. This process includes comprehensive evaluations, approvals, and tracking to minimize risks, and prevent disruption enabling the stability and security of infrastructure, while supporting ongoing improvement and innovation.

System Backups

Wolfspeed uses industry standard back up solutions to backup data critical to business operations. These backups are performed on a regular cadence and stored in multiple locations.

Network Security

Our infrastructure resides behind high-availability firewalls and is monitored for the detection and prevention of various network security threats. Network Access controls are utilized to help restrict access to systems from external networks and between systems internally. By default, all access is denied, and only ports and protocols explicitly allowed based on specific business needs are permitted. Wolfspeed maintains separate development and production environments. These environments are segmented using modern networking techniques to create secure partitions to allow that testing and production data and code do not directly interact.

Secure Network Connections

Transport Layer Security (TLS) encryption is configured for customer web application access using modern cypher suites intended to ensure that user data in transit is safe, secure and available only to intended recipients.

Patch Management

Wolfspeed strives to apply the latest patches and updates to operating systems, applications and network infrastructure to mitigate exposure to vulnerabilities, with a specific emphasis on security-related patches. Patches are tested using partitioned development environments prior to being deployed into production.

Vulnerability Management

Vulnerability scanning is performed on a regular basis to identify vulnerabilities and to determine the effectiveness of the change management program. Each vulnerability is reviewed to determine if it is applicable, ranked based on risk, and assigned to the appropriate team for remediation.

Role-Based Access

Role-based access controls are implemented for access to web systems. Access controls to data in our systems and environments are based on the Principle of Least Privilege.

Authentication and Authorization

We require that authorized users be provisioned with unique account IDs. Our password policy covers all applicable systems and applications and enforces the use of complex, unique passwords. Individuals are granted access to certain resources based on their specific job function. Requests for additional access follow a formal request and approval process as defined by our security guidelines.

Security Monitoring and Incident Response

We monitor our digital estate around the clock looking for signs of cyberattacks. All events are analyzed, evaluated, and if an incident arises, remediated. We have relationships with key partners that help us respond to cyber incidents and allow the business to remain resilient.

Data Protection and Privacy

We apply data management principles to customer data that Wolfspeed processes, handles, or stores. We protect personal data using appropriate physical, technical, and organizational security practices. Any identifiable information that we may process, handle or store is encrypted at rest and in transit as appropriate. We give additional attention and care to sensitive personal data and respect local laws and customs, where applicable. We take all reasonable steps to protect information we receive from our customers from loss, misuse or unauthorized access, disclosure, alteration and/or destruction. Before any data is collected from web users, permissions are granted from the user for all non-necessary data. If the user opts-out of data collection, only specific, necessary forms of data, such as IP address are collected.

RESPONSIBLE BUSINESS PRACTICES, INNOVATING FOR A BETTER FUTURE

At Wolfspeed, we are at the forefront of innovation, delivering disruptive technology solutions for a more efficient and sustainable future. We strive to operate at the highest ethical standards and actively manage risks inside and outside of the organization. We adhere to the policies outlined in our [Code of Conduct](#) and require our suppliers to adhere to strict social and environmental standards, as described in our [Supplier Code of Conduct](#).

In the second half of 2025, as part of its efforts to strengthen its capital structure, Wolfspeed entered into and emerged from a pre-packaged plan of reorganization under Chapter 11 of the U.S. Bankruptcy Code. Through this process, Wolfspeed much improved its financial stability marking the beginning of a renewed commitment to our mission of delivering cutting-edge solutions in a sustainable way to remain competitive in the forefront of our industry.

The majority of the data included in this report is on a calendar year basis (January to December). Financial data is reported on a fiscal year basis (July to June). Our financial data for FY 2025 can be found in our [2025 Annual Report](#).

PRODUCT QUALITY

Our products must satisfy industry standards, our customers’ expectations, and our own. We test our products and simulate them in harsh environments to confirm their reliability. We follow AEC, IATF, ISO9001, AS9100 and JEDEC standards (see details below). Wolfspeed has representation on key industry and technical committees to drive the adoption of silicon carbide.

QUALITY POLICY (WIN)

At Wolfspeed, we W.I.N. with Quality. We strive to ensure the highest quality products and services to achieve customer satisfaction. We all must W.I.N. as stated in our Quality Policy. See our policy [here](#).

Implementing quality strategies to further our quality culture and investing in our people, processes and systems will enable our growth.

Our strategy is to integrate our people, systems and culture to drive quality as a competitive advantage.

Enhance and strengthen our quality engineering teams

Scale quality management system and processes

Advance automotive culture through key quality initiatives

We’re advancing our total quality culture through zero-defect strategies such as statistical process control, factory defect reduction programs and robust testing strategies. We’re also conducting supplier assessments and engaging in supplier development programs, all while we continue to focus on increasing overall customer satisfaction.

Process & Systems
Quality management systems and factory automation

Behavior
Active engagement in risk mitigation

Attitude
Proactive mindset

Culture
High quality product at optimized cost
Increased customer satisfaction
Enable zero defects
Meet automotive expectations

5S

Our quality initiatives also include a focus on implementation and enhancement of 5S practices in our manufacturing operations. This is a foundational piece of our Global Operational Excellence program.

Global Operations Manufacturing Excellence

- What Is It?**
 - A tool or approach to attain and maintain a high level of workplace organization
 - Engages employees to drive standardization and consistency
 - Provides visual cues when items are out of place
- Benefits to Wolfspeed and Our Customers?**
 - Provides a safe workplace
 - Improves our production readiness
 - Demonstrates our commitment to our customers’ quality and process control expectations
 - Enables a culture for consistent, repeatable, predictable, and sustainable processing

Wolfspeed implemented and achieved the following standards to demonstrate our ability to consistently provide products and services that meet customer and regulatory requirements:

- ISO 9001:2015: establishes criteria for a quality management system
- ISO/TS 16949: establishes technical specifications for automotive sector quality management systems and is one of the most widely used international standards in the automotive industry, harmonizing the different assessment and certification systems in the global automotive supply chain
- AS9100D standard, including ISO 9001:2015: describes quality management system requirements and specifies additional aviation, space and defense industry requirements, definitions and notes.

The following sites are certified for our quality management systems. Click on the links below to view our ISO 9001 and IATF 16949 certificates. Our certificates can also be found on our [Quality page](#) at [wolfspeed.com](#).

CUSTOMER SATISFACTION

Our customer support mission statement guides us to enable we meet or exceed our customers’ expectations.

Mission Statement

The mission of Wolfspeed’s customer service function is to always convey a passion for the customer and to consistently deliver the best service experience.

Vision Statement

Delivering customer satisfaction is about providing timely, responsive service with integrity, simplicity and a passion for excellence while meeting or exceeding the customer’s expectations.

Statement of Work

Oversees all elements of the order-to-cash process to maximize the value derived from a Wolfspeed product before and after the sale is made and by providing high quality products.

Customer Service Principles

- We consistently aim to prioritize our customers by understanding and anticipating their needs for service and support.
- We recognize that our customers expect us to evolve alongside them, which requires us to provide high-value experiences at every interaction and to offer best-in-class innovative designs and products.
- Aim to simplify the process for customers doing business with Wolfspeed, in an effort to ensure that we remain their preferred supplier.
- We take pride in actively listening to customers, responding promptly, and conveying a sense of urgency in addressing their needs, understanding that the manner of communication significantly impacts customer perception and satisfaction.

GLOBAL TRADE COMPLIANCE

We recognize our compliance responsibilities and the importance of exercising care and due diligence in our international transactions and related recordkeeping practices. Global Trade Compliance (GTC) is tasked with supporting compliance with import and export control laws and regulations. GTC’s mission is to support Wolfspeed’s business objectives while acting in full compliance with all applicable trade laws and regulations. Wolfspeed is CTPAT (Customs Trade Partnership Against Terrorism) certified, further illustrating our commitment to trade compliance and collaboration with Customs and Border Protection (CBP).

As part of our GTC activities, we screen all parties that we enter into business relationships with including customers, distributors, and known end customers. GTC manages and reviews requests for physical and IT access, in partnership with stakeholder departments to grant such access, in an effort to ensure only authorized personnel can gain access. Wolfspeed employees receive export awareness training as part of their onboarding and ongoing employment.

SUPPLY CHAIN

We conduct our activities in a manner that reflects our [Code of Conduct](#) and [Values](#), which include being a good corporate citizen, dealing fairly in business, behaving ethically, supporting basic human rights and a safe and healthy workplace, doing business in an environmentally responsible manner, and complying with applicable laws. We expect our suppliers to adhere to the same high standards, and we are committed to ensuring that our supply chain reflects our values and beliefs through our [Supplier Code of Conduct](#). Refer to the [Supplier Resources](#) page at [wolfspeed.com](#) to access our [Supplier Code of Conduct](#) and [Standard Purchase Order Terms and Conditions](#). Refer to our [Small Business Program](#) page at [wolfspeed.com](#) to learn about our commitment to maximizing opportunities for small businesses.

Wolfspeed is actively expanding our business with local and small suppliers by organizing and supporting targeted events that highlight and explore new opportunities. We are also updating our supplier on-boarding process to identify small businesses across our supply chain. We have developed a five-year supply chain sustainability goal that drives improvements to our procurement policies and processes that will demonstrate our commitment to responsible purchasing.

Wolfspeed expects all suppliers to make a clear commitment to environmental and social compliance including health and safety, labor, and ethical business practices through the [Supplier Code of Conduct](#) and the [Standard Purchase Order Terms and Conditions](#).

Wolfspeed has ISO 14001 and ISO 45001 requirements in the manufacturing agreement for contract manufacturers and evaluated various industry standard platforms as part of our future roadmap to strengthen our supply chain sustainability efforts.

Our Ambition

Assess our suppliers on social and environmental risks to strengthen partnerships with those with best practices.

Improve resilience across our supply chain.

Our Goal

Evaluate ESG risks and opportunities for 100%* of suppliers on our Approved Supplier List by 2025.

Achieve >5% eligible supply chain spend from small and/or local suppliers by 2025.

2025 Progress

- Distributed 120 ESG surveys
 - Response rate: 73%
 - Covered spend: 96%
-
- 6.1% of the total eligible spend with small and /or local suppliers
 - Expanded engagement with small and local suppliers accounting for spend shift
 - Reenergized program following business restructuring

* Purchased Quality Item (PQI) suppliers

RESPONSIBLE MINERALS SOURCING

Wolfspeed Responsible Minerals Sourcing Policy

Mining is an intensive process involving potential social and environmental risks that may cause lasting negative impacts if not properly managed.

Certain high-risk minerals (notably tin, tantalum, tungsten, gold and cobalt) sourced from regions of the world with ongoing conflict carry a risk of funding organizations that are involved in illegal or unethical activities, including human rights abuses such as child labor, harsh working conditions, environmental destruction, and corruption.

A growing awareness of the abuses committed in these areas of conflict has prompted an industry-wide investigation into any supply chain tainted by these atrocities. In the United States, the Dodd-Frank Wall Street Reform and Consumer Protection Act requires publicly traded companies to report annually on the presence of conflict minerals originating in the Democratic Republic of the Congo or adjoining countries in the products they manufacture or contract to manufacture. The purpose is to report any abuses, and through disclosure, halt the sourcing of designated minerals via supply chains implicated in conflict zones.

Wolfspeed’s Commitment

Wolfspeed’s Responsible Minerals Sourcing Policy is not only a commitment to uphold fundamental human rights but also a strategic approach to enhancing our business success. By confirming that we respect the rights of all individuals—especially those in our supply chain—we strengthen our reputation and build trust with our stakeholders, which is essential for long-term growth and sustainability.

Wolfspeed complies with applicable legislation and actively supports industry-wide initiatives aimed at promoting responsible sourcing, protecting human rights, and combating child labor. While we do not directly procure minerals from mines or their processors, we recognize our ability to influence and guide upstream supply chain actors through our clearly defined policies and practices.

Understanding the complexities of global supply chains, we collaborate with industry peers, suppliers, and various stakeholders to support responsible sourcing efforts through the Responsible Minerals Initiative (RMI). This collaborative spirit aligns with our core values of business ethics, labor rights, health and safety practices, and environmental responsibility, which are critical drivers of our competitive advantage.

Our proactive engagement in responsible sourcing not only meets legal and ethical standards but also mitigates operational risks associated with high-risk regions. By sourcing minerals responsibly from conflict-affected and high-risk areas, we align our procurement strategies with our commitment to integrity and corporate social responsibility.

To allow best practices in our supply chain, Wolfspeed’s internal due diligence framework adheres to the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas. We leverage tools like the Conflict Minerals Reporting Template (CMRT) and Extended Minerals Reporting Template (EMRT) from the Responsible Minerals Initiative (RMI) to enhance our investigations of high-risk minerals. This robust framework not only safeguards human rights but also positions Wolfspeed as a leader in responsible sourcing—a key factor in securing business partnerships and meeting customer expectations in a socially conscious market.

Supplier Expectations

To support ethical procurement practices and responsible mineral sourcing, Wolfspeed expects suppliers that provide components and/or materials containing “relevant minerals” to adhere to the same high standards to which we hold ourselves. For the purposes of Wolfspeed’s Responsible Minerals Sourcing Policy, relevant minerals currently include:

- Tantalum, Tin, Tungsten, and Gold, also known as “conflict minerals,” or 3TG”;
- Cobalt, Mica, Copper, Natural Graphite, Lithium, and Nickel; and
- Any other mineral identified by Wolfspeed as contributing possible risk to the supply chain.

We require suppliers to:

- Adhere to Wolfspeed’s Supplier Code of Conduct and all applicable laws and regulations related to responsible mineral sourcing;
- Source only from smelters and refiners validated by a third-party audit program. Accepted programs include: the RMI’s Responsible Minerals Assurance Process, the LBMA’s Responsible Gold Certification, or the RJC’s Chain-of-Custody Program;
- Make reasonable efforts to remove all non-participating and non-validated smelters or refiners from Wolfspeed’s supply chain;
- Design and implement due diligence frameworks and management systems consistent with OECD Guidance to achieve responsible mineral supply chains;
- Verify and inform Wolfspeed whether the minerals included in materials or component parts are conflict-affected or high-risk minerals;
- Respond to Wolfspeed inquiries for reporting templates and due diligence information, and promptly implement corrective actions identified and requested by Wolfspeed; and
- Extend these expectations to their own suppliers.

If these requirements are not met, Wolfspeed will proactively work with the supplier to further develop their due diligence capabilities to enable alignment with Wolfspeed’s supplier requirements. Wolfspeed will terminate relationships with suppliers that do not make substantive and prompt efforts to comply with our Responsible Minerals Sourcing Policy.

Health and Safety — Our Employees and Suppliers

Health and Safety — Our Customers

PEOPLE FIRST, PEOPLE ALWAYS

At Wolfspeed, we are the creators of the next-generation semiconductor technology that powers the world’s most disruptive innovations. In other words, it’s our job to make humankind’s greatest ambitions – real.

For us, making it real means making it the Wolfspeed way. We deliver unparalleled reliability on a massive scale from the first U.S.-based silicon carbide corridor with end-to-end substrate and power device fabrication to fulfill the world’s growing demand.

We have unlimited potential thanks to the hard work and dedication of the people who bring their gifts and talents to work for Wolfspeed each day. Our team is made up of global, forward-thinking innovators and problem solvers united behind one purpose: a more energy-efficient and sustainable future.

Wolfspeed strives to foster an inclusive and engaged workplace culture where every employee feels valued, respected, and empowered to thrive. By building a strong sense of community where employees feel connected and supported, we aim to enhance collaboration and innovation, enabling employees to show up each day to do their best and most productive work. We believe this allows Wolfspeed to solve problems that other companies think to be impossible, driving better business results.

OUR EMPLOYEES

Wolfspeed is an Equal Employment Opportunity (EEO) employer, employing regular full-time and part-time employees, as well as temporary and contract employees as necessary. We employ over 4,400 regular full-time and part-time employees. We also employ individuals on a temporary, full-time basis and use the services of contractors as necessary. A significant portion of the organization’s activities are performed by workers who are employees.

^[1] The numbers reported include contingent workers assigned to Wolfspeed Inc. in a temporary capacity. These workers are not employees of Wolfspeed Inc. (excludes employees with no gender identified).

^[2] U.S. employees are considered “at will” and are not bound by any employment contract. Therefore, none of our U.S. employees are classified as “permanent”. The data provided is limited by employee self-disclosure and does not necessarily represent the entire employee population.

^[3] Data presented here is for our significant locations of operations and represents approximately 85.6% of our total number of employees in calendar year 2025.

EMPLOYEE ENGAGEMENT

Culture of Listening and Transparency

Effective employee communication is foundational to Wolfspeed’s success. Clear, transparent and consistent communication builds trust, strengthens alignment and enables employees to remain focused on delivering for customers. This commitment is especially important during periods of change, when uncertainty can otherwise impact engagement and performance.

During a year marked by significant transition, including leadership changes and the company’s emergence from Chapter 11, Wolfspeed prioritized open and honest dialogue with employees. We increased the frequency and visibility of communications across video, email and intranet channels to provide clear updates on company announcements, strategy, performance, safety, and operational priorities. These efforts reinforced shared goals around revenue growth, profitability, innovation, and research and development.

A cornerstone of this approach was an expanded emphasis on **two-way communication and listening**. Wolfspeed increased the use of Frequently Asked Questions (FAQs) as part of major company updates to address employee questions clearly and consistently. FAQs were regularly included with strategic and performance-related communications, demonstrating responsiveness to employee feedback and helping create shared understanding during a period of transformation. Wolfspeed maintained a dedicated *We Are Listening* mailbox where employees can submit questions, comments and concerns and receive a response to every message.

Leadership visibility and engagement were further strengthened through **Quarterly All Employee Town Halls**, hosted by the CEO. Each Town Hall included a dedicated question and answer segment to address employee questions in real time, reinforcing a culture of listening and transparency. Following each session, an expanded FAQ document was posted on the intranet to capture both questions addressed live and those that could not be answered during the event, ensuring follow-through and closing communication loops.

We also continued to invest in digital communication and accessibility. The intranet serves as a central, regularly updated hub for company news, resources and collaboration, with information shared across global sites to support equitable access. In support of alignment and engagement, the company launched **All In to Win**, a centralized intranet resource that connects employees to the company’s strategy, progress, leadership messages and stories highlighting how teams and individuals contribute to shared success.

Together, these efforts underscore Wolfspeed’s commitment to transparency, listening, and keeping employees informed, engaged and aligned with the company’s priorities.

Values in Action

We continue to recognize the impactful contributions made by Wolfspeed employees to our customers and our company through Values in Action, our employee recognition and years of service program which launched in 2021. Through this program, we can reward and honor employees for going above and beyond and delivering exceptional results aligned with our values and our culture.

All Wolfspeed employees can formally recognize their peers as well as be acknowledged for service anniversaries through the centralized platform. Through Values in Action, employees can simply thank colleagues for a job well done or attach value to the recognition by issuing points. Points have a monetary value and can be used on the Values in Action platform’s online store to purchase products, gift cards or donate to charities, allowing employees to cash in their points for something that is meaningful to them.

EMPLOYEE ENGAGEMENT

(CONTINUED)

Employee Engagement Survey

We have been committed to collecting and acting on employee feedback since 2017. In 2021, we implemented a new enterprise employee engagement survey to give employees the opportunity to provide confidential feedback on how we are doing in the areas of global leadership, culture, and employee personal development. In 2025, we transitioned to bi-annual pulse surveys to make it easier for employees to share their thoughts and feelings more frequently. Building on the progress, learning, and action planning from our previous enterprise-wide surveys, our 2025 overall participation scores were 81% and 77%. Insights from prior surveys led to the launch of the As a Result of Your Feedback intranet series, which shares actions taken in response to employee input.

With an overall engagement score of 64 in August 2025 (we did not measure engagement in February 2025), we feel this gives us strengths to build on as well as opportunities for improvement.

Participation Rate

Participation Rate by Category

The top strengths we heard in the 2025 survey were that employees believe the work we do at Wolfspeed is important, they understand how their work contributes to Wolfspeed’s goals and they feel they are treated with respect at Wolfspeed. These strengths illustrate the connection our team feels to the importance of the work we do and their role in driving our business success as well as their personal success. As a result of the employee feedback received from the 2025 employee engagement pulse surveys, we:

- Increased frequency of business updates provided to all employees for enhanced clarity about important decisions at Wolfspeed.
- Continued to make program improvements and additions in the areas of learning and development.
- Shared aggregate survey results with managers who had four or more respondents, while maintaining confidentiality, enabling them to review feedback and take action at the team level.
- Shared survey results at the business unit level, allowing them to focus and take action on the unique strengths and challenges of each of our teams to continuously move Wolfspeed forward.

Employee Resource Groups

Employee Resource Groups (ERGs) play a critical role in advancing our values and business objectives. They serve as a platform for discussing strategic goals within the organization, fostering a more inclusive and supportive work environment. ERGs provide a strong support system that promotes awareness, respect, and inclusion in the workplace. Each ERG is dedicated to benefiting and advocating for both members and non-members by working strategically, both internally and externally, and contributing to our overall business success. All ERGs and their associated events are voluntary and open to all employees.

EMPLOYEE ENGAGEMENT

Learning to Make it Real: STEM Day 2025

In 2018, Wolfspeed employees in North Carolina hosted their children on our Durham campus to celebrate what we make possible and the wonders of science, technology, engineering, and math during our first STEM Day event. Since then, we have continued to collaborate with community partners each year to provide K-12 students and adults with the opportunity to investigate what it means to do what others say can’t be done through in-person and virtual demonstrations, presentations, hands-on activities, and more. All STEM Day activities are coordinated and led by Wolfspeed employees who volunteer their time before and during the events.

From 2020 to 2024, our STEM Day was held as a virtual event allowing us to continue our tradition while also giving Wolfspeed employees from around the world and their families the opportunity to participate from the comfort of their own homes. Highlights from past virtual STEM Day events include a live keynote address by NASA Astronaut Christina Koch in 2020, a live presentation and demonstration by Dr. Aram Amassian, Associate Professor of Materials Science and Engineering at North Carolina State University (NC State) in 2021, and a presentation by the team at SciBridge in 2022 sharing how they are bridging the gap of scientific discussion between U.S. and east African scientists. In 2023, participants heard from two Wolfspeed engineers who worked in the United Kingdom alongside the Jaguar TCS racing team as embedded engineers and had a Q&A session with one of the Jaguar TCS racers, Sam Bird. STEM Day 2024 highlighted our partnership with FIRST Robotics. Students from two local North Carolina FIRST Robotics teams in addition to FIRST North Carolina Director, Marie Hopper, joined us to share about their experiences with FIRST and how students who are interested can get involved in their local communities.

STEM Day 2025 returned to an in-person event for local Wolfspeed employees and their families. Around 75 employees, volunteers and children gathered on a Saturday to Learn to Make it Real through hands-on science activities. All employees also had access to every STEM Day activity and the scientific explanation for each via the intranet so they could participate at home if they were not local or were unable to attend.

Before the event, we created a special STEM Day intranet page to provide employees with easy access to information.

Inclusive Leadership

Inclusive leadership is central to Wolfspeed’s culture and long-term success. Our goal is to ensure leaders value diverse perspectives, create environments where everyone feels heard, and provide equal opportunities for all employees to thrive and contribute. Achieving this goal depends on strong, capable leaders who model inclusive behaviors and translate company priorities into meaningful actions for their teams.

Wolfspeed’s leaders play a critical role in advancing inclusive leadership by shaping day to day employee experiences and aligning teams to shared goals. As the company navigates changes and executes on strategic priorities, leaders are instrumental in fostering trust, championing our culture, and working to ensure teams remain engaged, informed, and aligned. Their ability to listen, communicate clearly, and support employees through periods of transformation directly contributes to organizational performance and a culture where everyone can succeed.

In an effort to ensure leaders have the skills, resources and confidence needed to lead inclusively, Wolfspeed invested in a comprehensive set of development and support initiatives throughout the year:

- **Quarterly Leader Forums** were hosted with the CEO to provide transparency on company strategy, goals, and progress, enabling leaders to align team priorities and reinforce consistent messaging across the organization.
- A **Manager Resource Intranet Page** was launched, offering centralized, practical tools designed to help leaders quickly and effectively communicate key updates to their teams.
- **Wolfspeed Leadership Behaviors** were introduced to clearly define what successful leadership looks like and how leaders are expected to show up for their teams.
- **The Supporting Your Team** resource series delivered actionable guidance to help leaders navigate periods of transition, strengthen listening skills and build trust, with each communication providing practical application tips and additional learning resources.
- **Leadership workshops** were facilitated to provide hands on learning experiences that build confidence, enhance performance and support leader growth within Wolfspeed’s dynamic environment.

Together, these efforts reinforced Wolfspeed’s commitment to inclusive leadership and the goal of ensuring leaders were equipped to support their teams and drive sustainable success.

Volunteers from STEM Day 2025 in Durham, North Carolina

COMMUNITY ENGAGEMENT

At Wolfspeed, we believe in closing the opportunity gap in our communities. We also believe that every individual should have a roof over their heads, enough food to eat and the opportunity to excel, and that by closing the opportunity gap, this is attainable for everyone. Whether through corporate events and sponsorships or employee-led initiatives, we live our Values every day by doing the right thing at work and in our local communities.

Community Partnerships Highlights

FIRST Robotics

FIRST is the world’s leading youth robotics community, delivering hands-on STEM learning that inspires innovation, builds confidence and prepares kids for life. Since partnering with FIRST Robotics in 2019, our collaboration has expanded to national and international support.

The Daniel Center for Math and Science

The Daniel Center prepares students for post-high school education through engaging teaching and learning experiences. Through FIRST Robotics, we are able to sponsor

Class Packs for The Daniel Center, which assist educators and facilitators to guide their students as they begin or continue a journey of STEM exploration using real-world scenarios and challenges.

Boys and Girls Club in Siler City

Wolfspeed has established a strong partnership with the Boys and Girls Club in Siler City, focusing on empowering young people. Our initiatives include a three-year sponsorship to fund a Club Program Director, facility improvements by Wolfspeed volunteers, participation in STEM activities and board membership by Adam Milton, Senior Vice President of Global Manufacturing Operations. These efforts contribute positively to the Siler City community and support local youth.

Our College and University Partnerships

Wolfspeed is proud to foster strong relationships with colleges and universities. Our company not only partners with higher education institutions for recruitment purposes, but also for consulting and research, corporate social responsibility, early talent development, and executive thought leadership on campuses. Wolfspeed builds strategic partnerships with colleges and universities that have a strong focus on STEM and community engagement.

To share a few examples, Wolfspeed has a decades-long partnership with North Carolina State University, where five of our six founders graduated. The Wolfspeed Endowed Scholarship in Memory of Dr. John Palmour and the John Palmour Distinguished Professorship in Materials Science and Engineering were created in 2023. Our company also supported North Carolina Agricultural and Technical State University in many ways, including a \$4 million commitment over five years for the Wolfspeed Endowed Scholars Program. In the Mohawk Valley region, Wolfspeed partners with SUNY Polytechnic Institute on the Wolfspeed Scholars Program, providing hands-on experience, educational skills and careers after graduation.

Employee Initiatives Highlights

2025 U.S. Winter Donation Drive

Wolfspeed employees across U.S. locations supported local communities through the 2025 Winter Donation Drive by collecting and donating toys to nonprofit partners serving children, families and veterans. Site level partnerships included Military Missions in Action (Durham), Northwest Arkansas Children’s Shelter (Fayetteville), the Neighborhood Center (Utica), and the Boys & Girls Club of Siler City.

Red Cross Blood Drive

In Mohawk Valley, employees partnered with the American Red Cross to host the site’s first on-site blood drive. Volunteers and donors collected 32 pints of blood, supporting local healthcare needs and helping save lives in the surrounding community.

Local Municipal Parks Volunteering

Employees volunteered in Raleigh, NC and Utica, NY to improve local municipal parks through planting, mulching, and landscape beautification. These efforts enhanced shared community spaces while supporting environmental stewardship and employee well-being.

Creek Week Clean Up

Wolfspeed employees participated in Creek Week in partnership with Keep Durham Beautiful, volunteering to clean roadways and greenspaces along East Cornwallis near RTP. Nine EHSS team members removed an estimated 630 pounds of litter, including trash and recyclables, contributing to environmental stewardship and a cleaner local community.

**Our Ambition**
Provide more opportunities for STEM education at all levels.

**Our Goal**
Establish STEM partnership at 100% of our major locations by 2025.

**2025 Progress**

- FIRST Robotics support provided in North Carolina (Durham & Chatham), New York (Utica), Arkansas (Fayetteville) and Northern Ireland.
- FIRST Robotics Class Packs provided to The Daniel Center in Raleigh and Boys & Girls Club of Central Carolina.
- Cultivated relationship with the Boys and Girls Club in Siler City and sponsored the hiring and retention for the location’s new Club Program Director position.

LEARNING AND DEVELOPMENT

Wolfspeed is committed to investing in the growth and development of its most important resource—its people. The company provides a wide variety of opportunities for employees to develop professionally and grow their careers at Wolfspeed. Wolfspeed employees receive their learning and development through a combination of knowledge from job-related experiences, interactions with others and formal developmental offerings.

Through this multi-dimensional approach to learning, we assist employees’ discovery of valuable insights into their potential through hands-on experience, synchronous and asynchronous learning, and enhanced peer interactions. We translate insights into actions that result in innovative approaches to existing work and potential new career paths within one’s current organization, the broader organization or, if it is in the best interest of the individual employee, external to the company. One hundred percent of employees who are employed at the time of performance reviews are eligible to receive performance and career development reviews.

Wolfspeed offers employees a wide range of learning and development options ranging from courses and workshops that are topic or function based, to individual, self-paced learning on topics of interest to employees.

Additionally, Wolfspeed has extensive technical; environment, health, and safety; compliance; technology; and quality training available to employees in an effort to enable every employee is well-equipped to perform their job safely and effectively.

Technician Certification Program

We developed two training programs to support business needs and employee career growth – The Technician Certification Program and the Education Sponsorship Program.

428 EMPLOYEES

completed our Technician Certification Program

The Technician Certification Program combines science theory and skills with hands-on activities. Successful completion of the program will equip participants to meet the requirements needed to be considered for entry-level technician roles.

The Education Sponsorship Program is an education development program designed to encourage graduates of the Technician Certification Program to pursue their associate’s or bachelor’s in engineering degrees. This offering is separate from our employee tuition reimbursement program, and we have partnered with local colleges and universities to cover the cost of tuition and books for employees. Upon the opening of the Marcy, New York, Fab, we expanded this program into the state of New York.

Reaching Your Career Goals is a Journey. We’ll Help You Get There.

Self Discovery

- What role do you want?
- What are the education requirements for that role?

Find Your Path

- Explore areas of study
- Choose your program (Associate, Bachelors)
- Speak with a college admissions advisor
- Take advantage of our company sponsored programs

Complete Degree

- Earn degree while continuing to work
- Network internally with people who are currently in the desired role
- Talk with your supervisor about workplace flexibility

Apply & Interview

- Find roles that you are now qualified for and apply

Educational Assistance Programs

Wolfspeed offers a number of education-related benefits, which are currently available to United States employees. Wolfspeed offers tuition reimbursement (Wolfspeed reimburses employees for completed applicable college coursework) and STEM education sponsorship (North Carolina and New York employees attend courses that are selected and paid for by Wolfspeed) as a benefit. Additionally, Wolfspeed offers a student loan debt repayment program for eligible early career employees in the United States.

Wolfspeed Training Offerings

Technician Certification Program ¹	The Technician Certification Program combines science theory and skills with hands-on activities. Successful completion of the program will equip participants to meet the requirements needed to be considered for an entry level technician role.
Education Sponsorship Program ²	The STEM Education Sponsorship Program is an education development program designed to encourage employees to pursue their associate or bachelor degree in specific STEM majors at designated partner community colleges, colleges and universities in North Carolina and in New York. This offering is separate from our employee tuition reimbursement program, and Wolfspeed will cover the cost of tuition and books for eligible employees.
8D Training	The 8D (Eight Disciplines) Problem Solving Process is a team-oriented systematic problem-solving method. Its purpose is to contain the problem, correct and prevent the cause of the problem from recurring. The 8D Problem Solving Process places great emphasis on getting to the root cause so that effective corrective and preventive solutions may be implemented.
Core Tool Training	Core Tool Training develops employees’ skills in quality by learning quality standards. Employees also learn new tools and how to utilize the tools they currently have to quickly and more efficiently solve problems.
On-The-Job Training (OJT)	On-the-job training (OJT) is a structured, hands-on method of learning to do a specific task that takes place in the actual workplace setting. The Global Manufacturing Operations Training team supports on-the job-training at Wolfspeed and helps our trainers to train more effectively. Train-the-Trainer classes for our OJT trainers include instruction, demonstration and practice of the Job Instruction Training method. OJT Trainers are also trained on how to improve their communication skills, provide constructive feedback and complete the certification process.

Personal and Professional Development

Resources for Your Development Site	Resources for Your Development is an Intranet site that allows employees globally to explore a wide variety of opportunities to help them develop and grow their careers at Wolfspeed. On the site, employees can sign up for classes, access information about career pathing, register for self-paced learning, learn more about Wolfspeed’s specialized development programs and much more.
Leadership Development Workshops	Leadership Development workshops are designed to strengthen alignment, reinforce expectations, and connect leadership practices to the business priorities ahead of us. Workshops are offered in people-leader specific and all-employee sessions, with content tailored and aligned to support effective leadership at every level of the organization
LinkedIn Learning	Wolfspeed partners with LinkedIn Learning to provide access to thousands of self-paced learning courses on professional development, technical development, and personal development topics.
Wellness Workshops ²	As the world around us continues to change at a rapid pace, several of our vendors offer ongoing webinar series’ to regularly provide timely strategies and insights to help employees and their families effectively tackle new challenges, whether at home, work or elsewhere. Topics range from mental health to managing stress, to money management and technology utilization.

We also offer transition assistance programs. We offer outplacement services to employees terminated as a result of workforce reductions or in case of position eliminations.

^[1] Opportunity is offered at Durham, U.S. site, in partnership with Durham Technical Community College

^[2] Opportunity is offered at all Wolfspeed U.S. sites.

COMPENSATION AND BENEFITS

Benefits and Compensation

Performance-Based Compensation

Our people are our most valued asset and are a driving force behind every breakthrough. That’s why we invest in competitive and performance-driven compensation designed to recognize excellence and reward impact. We commit to reviewing and analyzing our pay practices frequently in an effort to ensure they are objective, fair, and keeping pace with market.

Stock Awards

We endeavor to make our employees shareholders of the Company and consequently have granted equity far beyond general market practice. We believe that shareholders’ and employees’ interests can be mutually satisfied so all share in the success of the Company.

Annual Bonus

We continually reward our passionate efforts to meet annual business objectives. Our annual bonus program allows employees to share in the company’s success, with rewards tied directly to Wolfspeed’s financial and strategic achievements as well as each employee’s personal performance.

401(K) Match

Our financial planning programs empower our employees to build long-term financial security and retire with confidence. We offer matching contributions to our 401(k) savings plan.

Referral Bonus

We proudly reward employees who help us grow by referring exceptional talent.

Health and Wellness

Health Benefits

We offer flexible health and insurance programs to suit our employees and their dependents’ needs, including dental and vision coverage and options for Health Savings Accounts and Flexible Spending Accounts.

Mental Well-Being/Employee Assistance Program (EAP)

Our EAP is a free resource for employees and their dependents. It assists employees with a wide variety of services and resources including free counseling visits, solutions relating to legal and financial issues, working towards life goals, support for child/elder care and crisis, and trauma support.

On-site Fitness Center (Durham & Marcy)

Employees, dependents and those who have retired from the company enjoy access to fitness facilities. In addition, we offer a virtual fitness program to all employees globally.

Ergonomic Evaluations

Employees receive personalized recommendations, such as custom workstation arrangements and standing desks, from our on-staff specialist.

Wellness Program

Our employees can join interactive workshops and work with personal wellness coaches to design personalized fitness goals that match their lifestyle.

On-site Physical Therapist (Durham)

Employees have convenient on-site access to orthopedic physical therapy services Monday through Friday.

Life Insurance

We offer a variety of life insurance options for our employees and their dependents. Employees working 20+ hours per week are eligible.

Our Remuneration Practices

Our remuneration practices are rooted in fairness, transparency, and respect for the work our employees do. Decisions are based on relevant business factors including, but not limited to, the job requirements and responsibilities for the job in which an employee is performing, location of where the work is being performed and job performance. We comply with all federal, state and local laws and regulations and comply with Title VII of the Civil Rights Act of 1964. In addition, in 2021 the company began to conduct a “Pay Equity Study” annually in an effort to ensure all pay decisions are based solely on job-related factors including but not limited to education, experience, work history, and tenure. In cases where statistically significant discrepancies were discovered, pay changes were made to eliminate those discrepancies.

COMPENSATION AND BENEFITS *(CONTINUED)*

Time Off

Leave of Absence & Disability Coverage

Our policies cover unexpected time away for short- and long-term disability needs. Disability coverage is provided to employees who work 20+ hours each week.

Paid Holidays

We love to innovate, but we also know it’s important to take breaks to recharge and reset.

Paid Vacation

We celebrate the importance of rest and renewal. Our employees can accrue paid time off (PTO) throughout the year and use it when they’re ready.

Employee Growth

Training & Development

We offer in-person and virtual development opportunities for personal and professional growth.

Internal Promotion

Employees can grow their careers here by pursuing opportunities both inside and outside their current department or team.

Educational Assistance

Our employees can take advantage of three different educational assistance programs to fund job- and company-related courses and degrees.

Employee Resource Groups

Employee Resource Groups (ERGs) play a critical role in advancing our values and business objectives. They serve as a platform for discussing strategic goals within the organization, fostering a more supportive work environment. ERGs provide a strong support system that promotes awareness, respect, and inclusion in the workplace.

Other Benefits

EV Charging Stations

Thanks to our silicon carbide components, EV usage is accelerating worldwide. Employees can take advantage of electric vehicle charging stations at our Durham, North Carolina and Marcy, New York locations.

On-site Café (Durham & Marcy)

Our award-winning café serves breakfast and lunch. Weekly menus include specialty dishes, made-to-order pizzas and sandwiches, fountain and coffee drinks and much more.

Family Benefits

Adoption Assistance

We offer adoption assistance that helps cover adoption-related expenses such as agency and placement fees, home study fees, and other applicable costs.

Family Care

Employees are eligible to set aside pre-tax money for child and elder care support through our family care program and Wolfspeed provides monetary support for at home childcare assistance.

Paid Parental Leave

We know our employees need time off to bond with a new child. If they have a new birth, adoption or foster placement, we offer six weeks of paid parental leave for our employees. Eligibility starts on the first day of employment.

Social Responsibility

2025 Parental Leave¹

Gender	Female	Male	Total
Employees Eligible for Parental Leave	1,066	3,000	4,066
Employees Who Took Parental Leave	31	77	108
Employees Who Returned to Work After Parental Leave	30	74	104
Employees Who Were Still Employed 12 Months After Parental Leave	26	65	91
Return to Work Rate for Employees Who Took Parental Leave	96.8%	96.1%	96.3%
Retention Rate for Employees Who Took Parental Leave	83.9%	84.4%	84.3%

^[1] Data presented here is based on full and part-time U.S. employees and represents approximately 93.4% of global Wolfspeed employees. Employees terminated due to Divestiture or Reduction in Workforce are excluded.

HEALTH AND SAFETY AND ISO 45001

We believe providing a safe work environment is the most fundamentally important thing that we do for our employees. Their safety, health and overall wellbeing has been – and will continue to be – our number one value.

Our commitment is to put the same level of focus and innovation into our health and safety programs as we do our operational excellence.

To this end, all Wolfspeed operations are required to adhere to applicable Environmental, Health, and Safety (EHS) protocols. We routinely evaluate our EHS programs in an effort to ensure they meet or exceed the applicable regulations and help reduce incidents.

Wolfspeed focuses on continual improvements to our Occupational Health & Safety (OH&S) Management System. Our manufacturing sites in Durham, North Carolina maintained certification to ISO 45001:2018. The benefits of implementing an OH&S management system include improved health and safety risk management, cost savings, meeting external stakeholder expectations, enabling compliance with health and safety laws, and fostering employee participation as a foundational element of success. See our certificates, [here](#) on [wolfspeed.com](#).

Our Ambition

Providing a safe and healthy work environment is paramount to our success and protects our most valuable resource, our employees.

Our Goal

Establish a certified Occupational Health & Safety Management System for 100% of manufacturing sites by 2025*.

2025 Progress

- Durham and RTP both certified to ISO 45001 and maintaining their OHS system
- Marcy continued to make progress and was on track to implement and prepare for certification, but due to business changes external certification was put on hold
- Siler City and Moore Drive (expansion sites) will be evaluated for certification in the future

* Expansion sites will be evaluated for applicability.

Note: ISO 45001 certification in 2025 covered our two manufacturing facilities in North Carolina which represents over 57% of Wolfspeed’s operations (based on headcount).

HEALTH AND SAFETY—OUR EMPLOYEES AND SUPPLIERS

The safety, health and overall well-being of our employees and suppliers is integrated into the way we do business.

At Wolfspeed, we express our commitment to the Environment, Health and Safety, and Sustainability (EHSS) and other key aspects of our business in everything that we do. Our core values of Safety, Integrity and Respect, Ownership and Accountability, and Ingenuity and Passion guide every decision we make and our interactions with each other, our customers, partners, and communities.

In remaining steadfast to that commitment, Wolfspeed promotes **Protect the Pack** – an initiative focused on actionable behaviors that contribute to the EHSS culture of our team. Protect the Pack is first and foremost about our people. Our people are critical to the sustainable operations of our business.

It’s about how we demonstrate our commitment and our Values by “walking the talk.” It’s about empowering employees and suppliers to thoughtfully challenge each other and to have the courage to speak up if we see something unsafe. And it’s about how we motivate each other to not only work safely but improve safety.

Our best work is done together — as a Pack. And together, we protect the Pack!

Our commitment is articulated in our Environment, Health, and Safety Policy. See our policy [here](#).

In 2025, we continued the Protect the Pack Award to recognize employees who regularly display behaviors exemplary of our Protect the Pack culture. Additionally, our Durham, Moore Drive, Siler City, and Marcy locations implemented a permit-to-work process to control and authorize high-risk work activities systematically. As a result, the safety and health of both Wolfspeed employees and contractors have been enhanced through a stronger collaborative safety culture, minimizing operational downtime, and supporting regulatory compliance.

Occupational Health and Safety Programs

Wolfspeed deploys Occupational Health and Safety (OHS) programs and procedures, including applicable training, at our sites based on scope of operation.

Each OHS program describes the minimum requirements while taking into consideration the hierarchy of controls (including safer work practices, engineering controls, personal protective equipment, hazardous substances information, measurement and medical checks). Each program within our Environmental, Health and Safety Management System is reviewed on a periodic basis in an effort to ensure any new regulations or best practices have been incorporated. The OHS programs include, but are not limited to management of change, occupational health, general safety, process safety management, incident management, transportation, supplier safety, and chemical management.

Protect the Pack Award Winner - Marcy MOC Closeout Team - Lock Out Tag Out

Notable Program Improvements in 2025

EHS Observations: Innovative Tool to Empower Employee Engagement

Wolfspeed launched the EHS Observations App which enables employees to actively participate in maintaining a safe and compliant workplace and protect the environment. The EHS Observations app allows users to easily communicate any EHS sightings directly to the EHS Team, ranging from potential hazards to safety concerns to suggested improvements. Importantly, the app provides users with the option to share positive observations, recognizing safe practices and behaviors that contribute to a culture of Protecting the Pack.

Elevating Supplier Engagement and On-site Monitoring

Wolfspeed’s supplier safety and compliance program enhances our ability to monitor and engage with suppliers, supporting safety across all our partnerships. We routinely monitor and support compliance with our safety standards, and our supplier sponsors engage regularly with on-site suppliers to help maintain compliance and address safety concerns. Our commitment to continual improvement and high safety standards is demonstrated through regular reviews of our supplier safety programs; these reviews help take our supplier performance and workforce safety to the next level.

Site-specific Health and Safety Initiatives’ Highlights

Durham and RTP, NC	Marcy, NY	Moore Drive, NC	Fayetteville, AR
Protect the Pack focus on “see something, say something” to engage employees in sharing EHS observations and ideas for improvement.			
• Maintained ISO 45001 certification	• Continued implementation of ISO 45001 health and safety management system		• Expanded Emergency Response (ERT) with several new members. • Brought multiple skilled training capabilities in-house
• Continued engagement between leadership and operations to check and improve environmental compliance and health and safety requirements • Regularly conducted joint 5S and EHS walks • Assessed safety of new tools and new technology			

Employee Involvement in OHS

Employee involvement in OHS takes many forms, including EHS Teams, EHS point-of-contact interaction in the production areas, Lean Kaizen events and Management of Change processes. Our EHS training is connected to a learning management system and the on-boarding process for a new or transferred employee. Training is developed and tracked for these programs, and effectiveness is measured by observations, incident evaluations, team walk-throughs, and audits or inspections.

Senior management has supported continued improvement with OHS-focused communications via daily safety topics and management safety walks in our manufacturing operations in Durham, NC and Marcy, NY. Our commitment to a cultural standard of excellence enables Health and Safety processes are managed to protect our people and property. In addition to our annual key performance goals, Wolfspeed values daily communications around Health and Safety to *“Protect the Pack.”* This approach empowers our employees to place Health and Safety communication first and is reflected in our organization’s commitment to improving performance.

Employee Health and Wellbeing

Wolfspeed supports the well-being of our employees through programs that promote a healthy lifestyle. We are committed to offering benefits to employees and their families to assist in improving health and lifestyle choices. Programs throughout our operations are tailored to the needs of the employees in the region and include many health-related benefits. In Durham, NC, we offer our workers the services of an on-site licensed physical therapist. In our international locations, we adhere to regulatory benefits and health and wellness requirements. In our United States locations, for those enrolled in our medical benefits program, we offer programs such as our Bright Choices wellness program, which is designed to encourage employees and their families to adopt healthy lifestyle habits. This program provides options for employees to receive on-line classes and health coaches for preventive health care. Employee benefits include medical and dental insurance, health and retirement savings accounts, childcare assistance, fitness centers at some locations, paid time off and family leave programs. Spring Health was rolled out in 2022 and provides an improved mental well-being benefit, available at no cost to all employees and their household family members age 6+. Our Mental Health Allies Employee Resource Group has generated improved awareness of the importance of mental health at work. Refer to the *Benefits* section of this report to learn more.

Incident Management

Our policies require incidents to be immediately reported, when personnel become aware of symptoms or any indication of a work-related complaint. Any concerns regarding hazards in the workplace can be reported to the employees’ supervisor, other leadership, any EHS staff, entering via our online reporting tools, or through our corporate whistleblower reporting platform.

Employees are protected from reprisal when reporting incidents. Our policies inform employees that they have the right to report work-related injuries and illnesses and that Wolfspeed is prohibited from discharging or in any manner discriminating against them for reporting work-related injuries or illnesses.

Wolfspeed follows confidentiality regulations in the country of operation. Our information management system has audit trail capability and control over who can view employee records. Permissions to view employee records are granted on a need-to-know basis.

Once initial information about the incident is gathered and documented, EHS assesses the incident severity. The incident severity assignment determines the type of cause evaluation required and the time allotted to complete it. Evaluations are then performed, usually led by the supervisor of the affected employee, to develop corrective actions to prevent recurrence of the incident and help improve our Environment, Health & Safety Management System.

Supplier Safety Programs

In cases where Wolfspeed does not control either the work or workplace, we exercise the leverage we have as a customer. Our Supplier *Code of Conduct* communicates and records the shared expectations around supplier health and safety performance. The implementation of a new Enterprise Resource Planning system is underway and is expected to be fully released in 2023. Supplier Lifecycle and Performance includes improvements to vetting all our suppliers using OHS criteria.

We recognize that our success is contingent upon the well-being of all those involved in our operations. Our commitment to supplier safety management reflects our broader dedication to sustainability, and we will continue to pursue excellence in safety as an integral part of our mission to create a better and safer world.

Occupational, Health, and Safety Performance

Wolfspeed tracks all work-related injuries and illnesses and works to improve the safety of our workplace through evaluation and prevention measures. We have a comprehensive program to address workplace safety issues. We are not aware of any occupational exposure issues in our manufacturing processes that would increase an individual’s risk of any specific disease.

Recordable Work-Related Injury-Illness Cases^{1, 2, 3, 4}

Recordable Work-Related Injury-Illness Types¹

Recordable Employee Work-Related Injury-Illness Rates^{1,2,3,4,5}

2025 Health and Safety Data Trends

2025 Information:

- Our injury and illness rates continued to decrease in 2025.
- We continue our focus on Protect the Pack as a workforce safety and health mantra as to how we do business. Our employees and contractors are empowered to “see something and say something”.

Future Look:

- We remain focused on improving all aspects of our EHS performance through enterprise-wide leading metrics.
- We continue to make progress towards ISO 45001 certification at our Moor Drive, NC and Marcy, NY sites.

^[1] Data presented here is for our significant locations of operations and our smaller United States locations, which represents approximately 91% of our total number of 2025 employees.

^[2] Recordable Work-Related Injury-Illness = Work-related injury or ill health that results in any of the following: death, days away from work, restricted work or transfer to another job, medical treatment beyond first aid, or loss of consciousness; or significant injury or ill health diagnosed by a physician or other licensed healthcare professional, even if it does not result in death, days away from work, restricted work or job transfer, medical treatment beyond first aid, or loss of consciousness.

^[3] Contract Worker = Any worker who is not a Wolfspeed employee but whose day-to-day work instruction is controlled by Wolfspeed

^[4] High-Consequence Recordable Work-Related Injury- Illness = Work-related injury or ill health that results in an injury from which the worker cannot, does not, or is not expected to recover fully to pre-injury health status within six months.

^[5] Rates are calculated using 200,000 hours worked (Rate = cases/total hours worked * 200,000)

HEALTH AND SAFETY—OUR CUSTOMERS

We design and test our products in an effort to ensure the health and safety of our customers and partners.

Electrical Isolation Testing

Electrical isolation testing is a direct current or alternating current dielectric withstand test that confirms our Power products will not transfer high or hazardous voltages, thus helping safeguard our customers from electrical insulation failures.

Harsh Environment Testing

To enable our Power modules will not fail or corrode in harsh environments, we perform temperature and humidity bias (THB) testing that exposes our products to high temperature and high humidity. This testing allows our Power modules can be operated in outdoor applications, such as renewable energy and electric vehicles.

Safe Use of Products

Wolfspeed’s silicon carbide (SiC) products enable high voltage applications, which can pose significant safety concerns. To address these challenges and support the safety of personnel and equipment, Wolfspeed offers comprehensive application notes. These resources assist customers in designing and assembling safe and reliable power electronic systems

PROCESSES THAT PROTECT THE ENVIRONMENT, PRODUCTS THAT IMPROVE IT

At Wolfspeed we are dedicated to minimizing resource use and reducing the environmental impact of our production process. We are committed to responsibly managing environmental impacts, including compliance with environmental regulations, and supporting continual improvement in our environmental performance. Our product sustainability goal is simple: enable the next generation of energy efficient power electronics to usher in a cleaner, more sustainable future for everyone. We are committed to responsibly managing the product stewardship of our products from cradle to grave through our internal programs based on IECQ QC080000 and IEC 63000 requirements.

PRODUCT SUSTAINABILITY

AUTOMOTIVE - ELECTRIC VEHICLES (EVs) AND FAST CHARGING

Wolfspeed’s silicon carbide MOSFETs enable faster, more efficient battery charging and increase power density of electric vehicles to reduce range anxiety. Wolfspeed’s broad portfolio of silicon carbide MOSFETs enable a reduction of EV power train losses by up to 80%, meaning increased range and performance for your EV. Additionally, re-designing a silicon-based 22 kW fast charger to be fully-silicon carbide can reduce losses by up to 40% while doubling the system’s power density.

DATA CENTERS AND AI

Driven largely by the broad adoption of AI, data centers could consume up to 9% of U.S. electricity generation by 2030. Wolfspeed silicon carbide-based products enable more efficient power conversion while increasing PSU energy density by up to 40%¹, which drives savings on cooling. Our products are optimized to meet global efficiency standards like 80+ Titanium.

RENEWABLE ENERGY - SOLAR AND ENERGY STORAGE SYSTEMS

Solar and energy storage systems can benefit from silicon carbide the inverter and MPPT boost converters. Using Wolfspeed silicon carbide in place of IGBT in three- phase solar inverters can improve power density by 50%, create simpler circuit topologies by reducing component count and assembly cost, and reduce overall inverter size and total system costs².

INDUSTRIAL MOTOR DRIVES

Industrial electric motors, including low voltage, servo, heat pumps and air conditioning, account for more than 45% of all global electricity consumed annually. Replacing legacy devices with Wolfspeed’s 10kV SiC MOSFET in a continuously operated 1 MW motor drive can lower CO₂ emissions by approximately 16 metric tons per year.

LEADING THE WAY TO A SUSTAINABLE FUTURE

Compared to alternatives, our products sold in 2025 will save approx:

49 mil
METRIC TONS
of CO₂e

over their lifetimes, which is

EQUAL TO:

the greenhouse gas emissions from over

11 mil
gasoline-powered passenger vehicles driven for one year*

**EPA Greenhouse Gas Equivalences Calculator*

PRODUCT STEWARDSHIP

Wolfspeed maintains an active program to minimize restricted materials and track reportable substances in our products.

Reportable Chemicals and Materials Process

Wolfspeed’s Product Stewardship team maintains an active process intended to identify restricted and reportable materials (RCMs), such as lead (Pb) in our products. This team addresses regulatory compliance of restricted and reportable substances on a worldwide basis. Chemicals and materials used during processing and the materials and components remaining in finished Wolfspeed products must go through an internal review and approval process. This includes supplier-provided material content declarations, applicable third-party test reports and compliance statements as appropriate. The base data requirements for suppliers are found in the Supplier Regulatory Compliance Requirements document on the [Supplier Resources](#) website.

The Product Stewardship team compares the supplier data against Wolfspeed’s Reportable Chemicals and Materials List (RCM List) to determine compliance status. The RCM List summarizes restricted and reportable chemicals based on worldwide regulations, certain industry requirements and mutually agreed upon customer requirements. The foundation of the RCM List aligns with the electronic industry’s IEC 62474 Database ([IEC 62474 - Material Declaration for Products of and for the Electrotechnical Industry](#)). This RCM List incorporates regulatory lists such as the [EU RoHS](#), [EU REACH](#) and California [Prop 65](#), as well

as industry lists such as the [GADSL](#) (Global Automotive Declarable Substance List) and the [AD-DSL](#) (Aerospace and Defense Declarable Substance List), as applicable to electronics.

Test reports are maintained in an effort to verify compliance status for the 10 European Union Restriction of Hazardous Substances (EU RoHS Directive 2011/65/EU) plus other common substances of concern. Test data must come from an ISO 17025-certified test facility. All other restricted chemicals are verified through material declarations and/or compliance statements from suppliers.

The data obtained through these efforts described in the preceding paragraphs is used to create material content declarations (MCDs) and other statements for addressing customer and regulatory Product Stewardship requirements, such as RoHS and REACH status.

Visit the Product Ecology section of our [Sustainability page](#) on [wolfspeed.com](#) to view our REACH and RoHS declarations. Requests for MCD and other Product Stewardship queries are addressed through [Customer Service](#). Proprietary or confidential substances or materials will not be disclosed in the material content reports.

PRODUCT END OF LIFE

Even though Wolfspeed’s products have a long life, all good things do come to an end of their useful life. How should our products be disposed of when removed from service?

As a component supplier, Wolfspeed provides finished goods that go into our customers’ end products. Wolfspeed continues to maintain and provide the necessary data for end-of-life management. All Wolfspeed Power chips, Power components and Power devices, including electronic components incorporated into Wolfspeed’s finished goods, should be considered for electronics re-use and/or recycling when feasible. Disposing of electronic waste in landfills is banned in many locations. In some areas of the world, it depends on the recycling vendors’ availability. End users are encouraged to check their local regulations or with local recyclers for advice on disposal of products containing Wolfspeed and other electronic components.

ENVIRONMENTAL MANAGEMENT AND ISO 14001

Wolfspeed is committed to responsibly managing environmental impacts, including being in compliance with environmental legislation as a minimum, and supporting continued improvement in our environmental performance.

The benefits of implementing an environmental management system include improved environmental risk management, cost savings, meeting external stakeholder expectations, enabling compliance with environmental laws and decreasing our environmental footprint through discovering new possibilities for energy, water, and waste usage reductions. Our current certificates can be found [here](#) on [wolfspeed.com](#).

Durham, North Carolina
• [ISO 14001:2015](#)

RTP, North Carolina
• [ISO 14001:2015](#)

Note: ISO 14001 certification in 2025 covered our two main manufacturing facilities which represents over 57% of Wolfspeed’s operations (based on headcount). Our manufacturing facility in Marcy, NY is in the process of implementing ISO 14001 with a goal to be prepared for certification in CY2027.

ENVIRONMENT, HEALTH, AND SAFETY POLICY

At Wolfspeed, we express our commitment to the Environment, Health and Safety, and Sustainability (EHSS) and other key aspects of our business in everything that we do. Our core Values of Safety, Integrity and Respect, Ownership and Accountability, and Ingenuity and Passion, guide every decision we make and our interactions with each other, our customers, partners and communities.

In remaining steadfast to that commitment, Wolfspeed launched [Protect the Pack](#) – an initiative focused on actionable behaviors that contribute to the EHSS culture of our team. Our commitment is articulated in our Environment, Health, and Safety Policy. See our policy [here](#).

NC ENVIRONMENTAL STEWARDSHIP INITIATIVE

Our North Carolina manufacturing facilities are members of the North Carolina Environmental Stewardship Initiative (ESI). ESI is a voluntary program, provided by the state of North Carolina through the Department of Environmental Quality, to encourage companies to go beyond compliance to reduce impacts on the local environment. The program requires companies to have a mature environmental management system and aggressive environmental goals.

ESI has three levels of participation. Our North Carolina facilities entered the program in 2018 at the first level as an Environmental Partner, with the goal of rising to the highest level as an Environmental Steward in the future. In 2019, our North Carolina facilities rose to the second level as a Rising Steward. In 2023, Wolfspeed was recognized as a member of North Carolina ESI for 5 years during the ESI conference. More information about the ESI program can be found [here](#).

MARCY, NEW YORK ENVIRONMENTAL STEWARDSHIP ACTIVITIES

Our manufacturing facility in Marcy, New York is the world’s first and largest state-of-the-art silicon carbide 200mm wafer fabrication facility. It is LEED® Silver certified by the [U.S. Green Building Council](#).

Featuring environmentally friendly and energy-efficient design solutions, this manufacturing facility opens doors for Wolfspeed to innovate for the future while also maintaining its enduring commitment to going beyond compliance, reducing impacts to the environment and industry-leading sustainability.

Environmental Features at Our Manufacturing Facility in Marcy, New York:

ENERGY AND GREENHOUSE GAS EMISSIONS

Our Products

Our Power products are designed with energy efficiency in mind. They enable industries to create cutting-edge energy-efficient solutions in areas such as renewable energy, vehicles, and EV charging.

Our Manufacturing

We understand the future risks posed by rising energy demands on our environmental, social, and economic well-being. Beyond providing energy-efficient products, we are committed to reducing greenhouse gas (GHG) emissions and improving energy efficiency across all Wolfspeed sites.

Although we are not currently bound by any national, regional, or industry regulations regarding energy and GHG emissions, we have set our own emission reduction goals. Our manufacturing facilities in the United States comply with local air pollution regulations, which cover criteria pollutants (like NOx and SOx) and toxic air pollutants. Each site adheres to its specific air permit requirements, and, where applicable, state air permit conditions limit fuel usage.

Energy Consumption

in Gigawatt Hours

2025 Energy Purchases Types

* We also established a long-term goal of reducing scope 1 and 2 emissions in line with the Paris Agreement to further reduce our climate impact in support of limiting warming to 1.5°C and transitioning to a net-zero carbon economy.

Our Ambition

Actively work to mitigate climate change and reduce our own -- and others' -- carbon footprint; stay efficient, stay productive. Be a company that makes a difference for future generations.

Our Goal

- Reduce scope 1 and 2 greenhouse gas (GHG) emissions by 50% by 2030
- Achieve net zero scope 1 and 2 GHG emissions by 2050*

2025 Progress

Decreased scope 1 and 2 (market) by 33% relative to base year.

Greenhouse Gas (GHG) Emissions

in Thousand Metric Tons CO₂ Equivalents

Our Carbon Footprint

in Metric Tons CO₂ Equivalents

Scope 1:
Our direct GHG emissions (e.g., fuel combustion, fluorinated gases used in manufacturing)

Scope 2 (location based):
GHG emissions from the consumption of purchased electricity at our facilities

Our Carbon Footprint

in Percent of Total GHG Emissions

Reducing CO₂e

The GHG emissions associated with using our products over their lifetimes represent roughly 99% of our total GHG footprint.

Compared to traditional less efficient alternatives, our Power products **sold in 2025 will save approximately 114 million MWh and 49 million metric tons CO₂ equivalents** over their estimated lifetimes.

2025 GHG and Energy Data Trends

Scope 1 and Scope 2

2025 Information:

- Wolfspeed operated point of use abatement units at the Marcy, NY facility that resulted in 7,347 tons CO₂e greenhouse gas emissions abated in 2025.
- Our scope 2 emissions decreased due to the closure of two facilities (RTP, NC; Farmers Branch, TX) and to reduced operations in Durham, NC which were followed by the closure of fabrication operations (fab) at the end of the year.
- Overall, we reduced our combined scope 1 and 2 (market) emissions by 33% relative to the base year.

Future Look:

- We continue installing point of use abatement units to address scope 1 greenhouse gas emissions from process equipment at our manufacturing facilities.
- Cross-functional teams are exploring options for energy reduction, renewable energy, and efficiency improvements.
- Where possible, we incorporate the best energy and emissions-related practices into new site designs.
- We have [GHG goals](#) to help focus our reduction efforts of our climate change impacts.

Scope 3

2025 Information:

- **Purchased goods and services and capital goods:** Our scope 3 emissions from purchased goods and services and capital goods decreased in 2025 due to scaling our production and operations to align with market conditions.
- **Fuel-and-energy-related activities (not included in scope 1 or 2):** Our use of fuel and electricity in manufacturing changed compared to 2024 due to site closures, resulting in a decrease in Scope 3 emissions from fuel- and energy-related activities.

- **Upstream and downstream transportation and distribution:** Our emissions from upstream and downstream transportation and distribution decreased due to differences in shipment amounts.
- **Business travel and employee commuting:** Our business travel emissions decreased in 2025 due to reduced business travel. Emissions associated with employees working from home are included in the employee commuting category. Overall emissions from employee commuting decreased due to employee base decrease.
- **Waste generated in operations:** The GHG emissions associated with the disposal and transportation of our waste decreased in 2025 compared to 2024 due to an overall decrease in the amount of waste we generated. More information about our trends in waste generation data can be found in the [Waste Management](#) section of this report.
- **Use, processing and end of life treatment of sold products:** The GHG emissions from the use of our sold products over their estimated lifetimes increased in 2025 due to product mix differences in 2025 versus 2024 and usage of regional grid emission factors based on revenue attributed to geographic regions based on product shipping addresses instead of the US average grid emission factor. The GHG emissions from processing of sold products decreased due to reduced sales to a mix of organizations that processed our sold intermediate products in 2025. The GHG emissions associated with the end-of-life treatment of our sold products decreased as overall weight of sold products decreased significantly.
- **Contract manufacturing:** Our scope 3 emissions from contract manufacturing increased in 2025 due to increased usage of their services.

Future Look:

- We are continuously exploring ways to decrease our scope 3 GHG impacts. We expect our emissions in some categories to increase in line with anticipated increases in production, as well as emissions in some categories to decrease due to technology improvements.
- We have [GHG goals](#) to help track our progress to reduce our climate change impacts. Our primary focus is to first reduce the GHG impacts of our operations (scope 1 and 2).

Product Carbon Footprint

Wolfspeed’s Product Carbon Footprint (PCF) program evaluates the greenhouse gas emissions associated with our products from cradle to grave. The program enables us to identify emissions hotspots, target opportunities for process improvements, and transparently communicate product-level climate impacts to our stakeholders.

To date, Wolfspeed has completed PCFs for selected products, and the resulting PCF reports have undergone third-party verification in accordance with ISO 14067, confirming its compliance with the international standard for product carbon footprint. The PCF program supports informed decision-making in manufacturing and represents an important step toward our long-term goal of implementing life cycle assessment (LCA) capabilities to enable a full study of the environmental impact of our products.

Climate Transition Action Plan

In 2022 we started working on Wolfspeed’s Climate Transition Action Plan (or CTAP). We explored the elements of a proper CTAP by utilizing CDP’s six guiding principles (accountability, internally coherent, forward- looking, time bound and quantitative, flexible and responsive, and complete) in conjunction with [We Mean Business Coalition \(WMBC\)](#)’s four core components which include an emissions reduction strategy, proper governance and business strategy integration, an action plan regarding plans for public policy advocacy and how Wolfspeed plans to foster a just transition.

We evaluated our current efforts against WMBC’s guidance and learned our strengths (e.g., calculated GHG inventory, largest emissions sources identification, climate-related oversight) and areas where we need improvement (e.g., inclusion of scope 3 in our emission reduction targets, financial evaluation, public policy engagement and advocacy).

During this initiative we have also identified actions that Wolfspeed can take to decarbonize, ranging from easiest to implement and least timely solutions to long-term solutions to support net-zero transition. We focused on the actions that are timely and realistic to deploy. These actions include the following areas:

process abatement systems, values stream engagement and synergy, an electric purchasing policy and implementation of an internal carbon price.

In 2023, Wolfspeed incorporated an emission reduction metric into the corporate annual bonus plan for all employees, including executives. The metric has material significance and creates long-term sustainable value for Wolfspeed and key stakeholders. This action reflects our focus on improving the maturity of our environmental sustainability program and driving our emissions reductions performance via tying it with our compensation program.

In 2024, Wolfspeed implemented point-of-use abatement measures to reduce greenhouse gas emissions at our manufacturing facility in Marcy, NY, while also decreasing the usage of a fluorinated gas in RTP, NC. These efforts are key components of our plan to decarbonize our manufacturing processes.

In 2025, we continued implementation of point-of-use abatement at our manufacturing facility in Marcy, NY for greenhouse gas emissions. The Siler City NC factory installed point-of-use abatement, scrubbers, and catalytic oxidizer for other emissions.

Product Carbon Footprint
Opinion Statement

DQS verifies that:
Wolfspeed, Inc.
4600 Silicon Drive
Durham, North Carolina, 27703

has engaged us to conduct an independent third-party verification of the **Product Carbon Footprint (PCF)** for the selected products below:

- 200 mm Bare Wafer
- 200 mm 1200V Epitaxial Wafer
- EPM3-1200V-0017C
- EPM3-1200V-0017D
- EPM3-1200V-0017D1

As a result of carrying out the verification of product life cycle greenhouse gas emissions, it is the opinion of DQS Inc. that:

- The Carbon Footprint of Product (CFP) results for the products listed above have been quantified in accordance with **ISO 14067:2018**.
- The verification has been performed in accordance with **AA1000AS v3 (Type 2 – Limited Assurance)** and **ISO 14064-3 verification principles**.
- **No material misstatements** have been identified in the reported CFP results.
- The applied system boundaries, assumptions, allocation procedures, and data sources are **appropriate, transparent, and adequately documented**.
- The product life cycle greenhouse gas emissions statements are **fair and accurate representations** of the products’ carbon footprints within the defined scope.

Statement Validity
This opinion statement shall be valid provided that no **significant changes** occur to the product life cycle, manufacturing processes, data sources, or system boundaries affecting the greenhouse gas emissions assessed by DQS.

On behalf of DQS and the Assurance team
January 21, 2026.

Behzad Sadegh
Director Sustainability
LCSAP Number: L17032301

DQS Inc. 1500 McConnor Parkway Suite 400 Schaumburg, IL 60173 USA

OTHER AIR EMISSIONS

When applicable, our manufacturing sites are subject to local air emissions regulations for criteria pollutants (NO_x, SO₂, etc.), hazardous air pollutants (HAP)¹ and toxic air pollutants (TAP)¹. Our sites comply with regulations through each site’s air permit requirements. For select processes, we use industry leading point of use abatement devices, central air emissions control devices, including dust collectors, thermal oxidizers, and scrubbers.

Other Air Emissions in Metric Tons

^[1] Air pollutants are classified as hazardous air pollutants (HAP) based on the United States EPA list of HAP. Air pollutants are classified as toxic air pollutants (TAP) per the regulations applicable at each facility.

2025 Other Air Emissions Data Trends

2025 Information:

Our usage of raw materials and fuel in our manufacturing processes changed in 2025 compared to 2024 due to changes in output and product mix causing our air emissions to either decrease or increase at the existing sites depending on the pollutant. Overall, due to the closure of two facilities (RTP, NC; Farmers Branch, TX) and to reduced operations in Durham, NC which were followed by the closure of fabrication operations (fab) at the end of the year, our other air emissions decreased in 2025.

Future Look:

We are continuously exploring ways to decrease our air emission impacts. When appropriate, we will continue using and installing air emissions control devices, including dust collectors, thermal oxidizers, and scrubbers.

WATER MANAGEMENT

Water Management

Because water quality and scarcity are growing concerns that affect all people and industries, we are committed to proper water use management practices for our Wolfspeed sites. We continuously strive to implement best management practices that conserve and recycle water and prevent and reduce water pollution:

- Our Durham, NC site has been reclaiming process water since **2005**, and currently recycles an average of **230,000 gallons of water** per day.
- In **2007**, our Durham, NC and RTP, NC sites initiated a wastewater pre- treatment system, which prevents approximately **55,000 pounds** of fluoride from entering the local water supply each year.
- In **2018**, we installed rainwater collection at our Durham, NC site, and now collect rainwater to supplement water used in the production process. In **2020**, we expanded the catchment area to increase the amount of rainwater harvested.
- We perform corporate-wide water risk assessment annually, beginning in 2020. The water risk assessment was updated in 2025 using the WRI Aqueduct and the WWF Water Risk Filter tools.
- In 2021, we developed our first corporate-wide water recycle goal to increase our water recycle rate by 25% by 2025 relative to the 2019 baseline.
- Our Marcy, NY facility operates ion exchange systems installed in 2022, which remove heavy and toxic metals from wastewater.
- In 2024, a process water reclamation system started at our Moore Drive, NC site. The system recycles an average of 160,000 gallons of water per day.

Water Withdrawals, Discharges, and Consumption

Our primary source for water withdrawal is municipal (third-party) sources. We also collect rainwater (fresh surface water) at our Durham, NC facility. Water is used primarily in manufacturing, including production processes and cooling tower operation. We also use water for human consumption, like drinking water, sanitary sewer, and breakroom/cafeteria use. Some locations also use water for irrigation.

We engage with our local water supply and wastewater treatment plants to plan for future infrastructure needs and communicate water conservation and management plans to prepare for possible drought conditions. We have not yet worked with our supply chain on water-related issues.

Many of our manufacturing sites have water reuse, reclaim, or recycling processes which offset municipal water purchases and reduce the consumption of water. In the past, our water recycle rate goals were developed for individual sites determined to be Wolfspeed’s largest water users. In 2021, we developed our first corporate-wide goals to increase our water recycling rate by 25% by 2025 relative to our 2019 baseline. The goal was established based on the technology available, quality of water needed for manufacturing processes, availability of water in operating regions, applicable water recycle regulations, and our ISO 14001 environmental management system priorities. The goal encourages the design of new sites equipped with recycle systems and the maintenance and optimization of existing sites' water recycling systems.

All facilities discharge to a municipal (third-party) wastewater treatment plant and are subject to local discharge requirements. Water discharged meets local regulatory requirements for water quality, including nutrients levels, metals, pH, and temperature. All our manufacturing sites have wastewater permit requirements that mandate the quality of water discharged. Select sites' also monitor stormwater quality to enable it meets discharge criteria, which prevents degradation of local water resources

Our Ambition

Enable sustainable and efficient use of water across all sectors. Be a company that actively addresses water scarcity.

Our Goal

Increase our water recycling rate by 25% by 2025

2025 Progress

- Achieved 26% water recycling rate
- Increased ~42% relative to base year

Water Demand in Millions of Gallons

Water Discharges and Consumption (Water Out) in Millions of Gallons

2025 Water Data Trends

2025 Information:

- Our overall withdrawal, discharge, and consumption volumes decreased due to the closure of two facilities (RTP, NC; Farmers Branch, TX) and to reduced operations in Durham, NC which were followed by the closure of fabrication operations (fab) at the end of the year.
- Our captured rainwater amount in 2025 was not significantly different in comparison with the previous year.
- We recycled more water in 2025 than any previous years. Our Marcy, NY, facility started a new water recycle process, increasing annual recycled water by 15 million gallons.
- We continued a water-focused sustainability team to drive Wolfspeed's water conservation efforts.

Future Look:

- Our water demand is expected to decrease slightly in 2025, due to the closure of facilities (RTP, NC; Durham, NC fab) and no expected significant changes at other facilities.
- Our **water recycle goal** concluded in 2025. We are currently evaluating the next generation of objectives to guide our continued sustainability journey.
- The water-focused sustainability team is exploring options for water use efficiency, improved data collection and tracking of key water metrics and is planning for next generation goal setting.

Water Risk Assessments

Our Approach

We assess water quantity risks at our facilities, recognizing water availability as crucial for operations. Using the [WRI Aqueduct Water Risk Atlas](#), we evaluate baseline water stress by analyzing water source basin risks. Additionally, we assess water scarcity with the WWF Water Risk Filter, incorporating operation-specific data.

After determining baseline water stress and scarcity risks, we evaluate their potential financial or strategic impact on our business, defining a substantive impact as one exceeding \$1 million USD or significantly affecting our operations, value chain, production, brand, revenue, or customer relations.

Wolfspeed leverages these assessment results to shape our sustainability strategy, prioritize water-related projects, and decide on the implementation of formal water management programs and utility outreach initiatives.

Our assessments currently focus on direct operations, with indirect consideration of customers, local communities, regulators, and investors. Suppliers are not yet included but will be integrated into water-related risk assessments in the coming years.

While high-quality freshwater is essential for our manufacturing, we have not implemented a formal quality-based risk metric. All water withdrawals are sourced from US-regulated drinking water supplies that meet strict standards. Additionally, our on-site water treatment systems maintain water quality to ultra-pure standards. We may adopt a formalized water quality assessment in the future if it becomes a significant risk to us or our value chain.

Our Results

Water Scarcity

Our [WWF Water Risk Filter](#) analysis does not classify any of our manufacturing, office, or laboratory sites, as “High” or “Very High” risk for water scarcity. Consequently, our facilities are not at significant financial or strategic risk from water scarcity. We will continue to conduct annual water scarcity assessments.

Water Stress

We utilize the [WRI Aqueduct Water Risk Atlas](#) to evaluate baseline water stress at our facilities, categorizing areas as “High” (40-80%) or “Extremely High” (>80%).

Three manufacturing sites in Durham, NC, are in “Extremely High” stress basins, while Siler City, NC, is in a “High” stress basin. These four facilities account for 62.8% of our 2025 water withdrawals and present potential financial or strategic risks. To mitigate these risks we prioritize water recycling, with Durham and Moore Drive recycling 72.0 and 50.8 million gallons respectively. Additionally, the Durham facility employs rainwater harvesting.

Four small, leased facilities are also located in “High” or “Extremely High” stress basins, but they represent only 0.4% of our 2025 water withdrawals and are not considered to pose significant financial or strategic risks to our business.

2025 Water Usage by Water Stress Category

Water Withdrawals¹

Water Discharges¹

Water Consumption¹

2025 Water Usage by Water Stress

Source	All Facilities	Facilities Located in Water Stress Areas ¹	Facilities Not Located in Water Stress Areas ¹
Water Withdrawals (millions of gallons)			
Third-Party Water	472.0	298.6	173.5
Fresh Surface Water (Rainwater)	0.24	0.24	0
Total Water Withdrawals	472.3	298.8	173.5
Water Recycled (millions of gallons)			
Total Water Recycled	161.8	122.8	39.1
Water Discharges (millions of gallons)			
Total Third-Party Wastewater	396.4	242.1	154.3
Water Consumption (millions of gallons)			
Water Consumed	75.9	56.7	19.1

^[1] All of our global facilities were assessed for baseline water stress using the World Resources Institute Aqueduct Water Risk Atlas. Baseline water stress measures the ratio of total water withdrawals to available renewable surface and groundwater supplies. Low water stress indicates the facility(ies) scored 0% to 10% for water stress. Low-medium water stress indicates the facility(ies) scored 10% to 20% for water stress. Medium-high water stress indicates the facility(ies) scored 20% to 40% for water stress. High water stress indicates the facility(ies) scored 40% to 80% for water stress. Extremely high water stress indicates the facility(ies) scored 80% to 100% for water stress. (Source: [WRI Aqueduct Water Risk Atlas](#))

WASTE MANAGEMENT

Our Products

Our Power products made from silicon carbide outperform conventional silicon components. In many applications, fewer silicon carbide components are required compared to silicon components when creating an electrical circuit with a similar output. To sustain a required current and voltage, silicon components must be larger, meaning silicon carbide components perform better with less materials required. Using less silicon carbide components for a circuit and reducing the number of materials in a silicon carbide versus silicon component means less materials are required to be disposed of at the end of their lives.

Our Ambition

Be a company that strives for zero waste through waste reduction and recycling.

Our Goal

Achieve 85% waste diversion rate from landfills by 2025*

2025 Progress

Achieved 39% waste diversion

Year	Diversion Rate (%)
2019	63%
2020	46%
2021	46%
2022	34%
2023	27%
2024	43%
2025	39%

Our Manufacturing

The responsibility for waste generation spans from cradle to grave, and Wolfspeed is dedicated to minimizing waste and disposing of waste safely and responsibly. We use many different hazardous and non-hazardous raw materials to manufacture our products, including acids, bases and solvents, which results in waste. We also generate solid waste from miscellaneous activities at our facilities, including pallets and cardboard from incoming raw materials and equipment, general office waste and cafeteria waste. Along our value chain, our largest impacts come from waste generated from our own activities. The transportation of our waste and spills or releases on our property or to the environment are possible negative impacts of our waste. When feasible, we seek responsible alternative management of waste such as alternative fuels blending or metals reclamation, which we consider a positive impact of our waste. Because our products are small and long- lasting, we do not foresee large impacts associated with the waste of our products. Guidance for how to dispose of our products at the end of their lives can be found in the [Product End of Life](#) section of this report. We have not yet assessed the waste generation of our upstream activities.

We have processes in place for how our waste is stored and managed to minimize impacts to employees and the environment, and aim to operate our facilities according to applicable waste regulations. We choose waste disposal methods that we feel reduce the impact on the environment as much as possible. When choosing a vendor for our waste streams, we strive to ensure the vendors are reputable and utilize the appropriate technology for the waste stream. We require all waste vendors to have a contract and sign our [Supplier Code of Conduct](#), which outlines requirements for environmental performance and compliance.

* Non-hazardous solid waste

In addition to reducing waste generation, we are dedicated to reusing or recycling materials whenever technically possible and economically reasonable. We seek opportunities for waste to be recycled or become a feedstock for use in other manufacturing processes. This not only lowers costs but helps us and other manufacturers to decrease virgin raw material consumption and reduce environmental impacts. We have implemented the following practices as part of our commitment to reduce, reuse and recycle materials:

We recycle solid waste materials in manufacturing and office sites, including metal, plastic, glass, paper, cardboard, wood, cans, bottles and electronics.

We send specific solid waste streams for use as fuels in waste-to-energy facilities.

We compost waste at the cafeteria in our Durham, NC facility.

In 2025
the composting program diverted approximately
25,000 pounds
of waste from the landfill.

We send waste liquid solvents and specific solvent contaminated solid waste to facilities for use as alternative fuel.

In 2025
over 400,000
pounds were used as alternative fuels.

In 2025
vendor constraints led to this previously recycled waste stream being diverted to waste-to-energy, avoiding over
over 300,000
pounds of landfill disposal.

We set our first waste-to-landfill reduction goals at our North Carolina facilities back in 2016. In 2021, we developed our first corporate-wide waste goal to increase our waste diversion from landfill to 85% in 2025.

Waste Generation
by Disposal Method

Waste Disposal Method	2019	2020	2021	2022	2023	2024	2025
Hazardous Waste

in Millions of Pounds

2024 Total Waste Generation
by Disposal Method

2025 Total Waste Generation
by Disposal Method

2025 Waste Data Trends

2025 Information:

- Our total waste volume decreased due to business changes.
- There was a decrease in hazardous chemical waste and non-hazardous solid waste due to the closure of two facilities (RTP, NC; Farmers Branch, TX) and to reduced operations in Durham, NC which were followed by the closure of fabrication operations (fab) at the end of the year.
- There was an increase in off-site disposal of non-hazardous wastewater.

Future Look:

- We are working on improving segregation of materials and enabling the recycling major waste streams such as cardboard, wood pallets, graphite chunks and compostable material.
- We are continually exploring ways to decrease our waste generation impacts. Our waste-to-landfill reduction concluded in 2025. We are currently evaluating the next generation of objectives to guide our continued sustainability journey.
- A cross-functional team is exploring options for solid waste diversion from landfill.

CIRCULAR ECONOMY

Wolfspeed is leading the transition from silicon-to-silicon carbide (SiC), enhancing technology to create smaller, lighter, and more efficient devices. Our commitment to the circular economy is evident in our innovative products and sustainable operational practices.

Our SiC-based power products significantly improve energy efficiency in sectors such as renewable energy and electric vehicles. By optimizing these technologies, we help reduce reliance on fossil fuels and facilitate the integration of solar and wind energy into the grid. Our advanced power devices also support electric vehicle adoption by enhancing energy use and charging efficiency.

Beyond product innovation, we prioritize minimizing resource consumption and eliminating hazardous materials in our manufacturing processes. Our focus on recycling and reusing materials helps reduce waste and recover valuable resources, closing the loop in our production cycles.

Through these initiatives, Wolfspeed drives breakthroughs that enhance energy efficiency and promote a sustainable future. We are dedicated to advancing a circular economy where resources are used thoughtfully, and environmental impacts are minimized. As we evolve, we remain committed to unlocking new opportunities that align with our sustainability goals.

Some of Wolfspeed’s activities supporting the concept of circularity:

We recycle metal, plastic, glass, paper, cardboard, wood, cans, bottles, and electronics.
We compost organic waste at our cafeteria in Durham, NC.
Some parts of our electronic waste are refurbished.
Our waste liquid solvents and fuel-bearing solid waste streams are used as alternative fuel at cement kilns.
Some waste streams from production are beneficially reused by other industries.
Precious metal streams are sent for recovery.
Our manufacturing facilities in Durham, NC; Moore Drive, NC and Marcy, NY recycle process water.
Our manufacturing sites in North Carolina are certified to the ISO 14001 standard, which encourages a life cycle view of products and services.
We established corporate-wide targets for reduction of emissions, recycling water and diverting waste from landfill.

BIODIVERSITY

Wolfspeed acknowledges the vital role of preserving and enhancing biodiversity. While biodiversity is not currently classified as a material topic for our organization, we recognize its significant interconnection with business resilience.

To date, we have evaluated our facilities for physical and reputational risks related to biodiversity using WWF’s Biodiversity Risk Filter. This assessment has enabled us to examine direct impacts and dependencies informed by the specific locations of our facilities and our classification within the semiconductor industry. From this initial analysis, we have gained a foundational understanding of our biodiversity risks, with several sites identified in the high or very high-risk categories. The primary drivers of these risks include pollution pressures on biodiversity and regulatory challenges associated with natural events, such as landslides and tropical cyclones.

Moving forward, we aim to conduct a more comprehensive analysis of these results to better interpret what the risk scores indicate for our biodiversity performance planning and monitoring. This includes assessing the impacts and dependencies of our supply chain on biodiversity, which will be a focus area for future evaluations.

UN SDGS DISCLOSURES

The 2030 Agenda for Sustainable Development was adopted by all United Nations Member States and provides a shared blueprint for peace and prosperity for people and the planet, now and into the future. The seventeen Sustainable Development Goals (SDGs) are an urgent call for action by all countries in a global partnership. We have reported on how the UN SDGs and their specific targets align with our business focus, strategy, and material issues. Refer to the **Our Contributions to the UN Sustainable Development Goals (SDGs)** section of this report for more information about how our business activities contribute to the UN SDGs.

SDG	Relevant SDG Target	Related Material Issue	Relevant Sections of this Report	SDG	Relevant SDG Target	Related Material Issue	Relevant Sections of this Report
	1.2 By 2030, reduce at least by half the proportion of men, women, and children of all ages living in poverty in all its dimensions according to national definitions	Community Engagement (Local and Global)	Community Engagement		7.a By 2030, enhance international cooperation to facilitate access to clean energy research and technology, including renewable energy, energy efficiency, and advanced and cleaner fossil-fuel technology, and promote investment in energy infrastructure and clean energy technology	Acceleration of Sustainable Technologies Product Innovation	Why Wolfspeed Scalable Capacity for Silicon Carbide Product Sustainability
	2.1 By 2030, end hunger and ensure access by all people, in particular the poor and people in vulnerable situations, including infants, to safe, nutritious, and sufficient food all year round				8.4 Improve progressively, through 2030, global resource efficiency in consumption and production and endeavour to decouple economic growth from environmental degradation, in accordance with the 10-year framework of programmes on sustainable consumption and production, with developed countries taking the lead		
	4.4 By 2030, substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs, and entrepreneurship				9.4 By 2030, upgrade infrastructure and retrofit industries to make them sustainable, with increased resource-use efficiency and greater adoption of clean and environmentally sound technologies and industrial processes, with all countries taking action in accordance with their respective capabilities		
	3.9 By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water, and soil pollution and contamination	Occupational Health and Safety Employee Attraction/Development/Retention	Health and Safety — Our Employees and Suppliers Learning and Development		10.2 By 2030, empower and promote the social, economic, and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion, or economic or other status	Community Engagement (Local & Global)	Community Engagement
	6.3 By 2030, improve water quality by reducing pollution, eliminating dumping and minimizing release of hazardous chemicals and materials, halving the proportion of untreated wastewater, and substantially increasing recycling and safe reuse globally	Water and Wastewater Management	Water Management		12.5 By 2030, substantially reduce waste generation through prevention, reduction, recycling and reuse	Waste Management	Waste Management
					13.2 Integrate climate change measures into national policies, strategies, and planning	Climate Change	Energy and Greenhouse Gas Emissions TCFD Disclosures

TCFD DISCLOSURES

We are committed to transparency of our GHG emissions and climate-related risks and opportunities, and as a result, we are disclosing this information according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). These disclosures help describe our climate-related impacts and how we understand and manage climate-related risks and opportunities. Further information about our GHG emissions can be found in the [Energy and Greenhouse Gas Emissions](#) section of this report and in our CDP Climate Change responses

TCFD Recommended Disclosure	Location of Disclosure
Governance	
Disclose the organization’s governance around climate-related risks and opportunities	Sustainability Oversight Governance and Nominations Committee* Wolfspeed’s CDP Climate Change response*
a) Describe the board’s oversight of climate- related risks and opportunities	
b) Describe management’s role in assessing and managing climate-related risks and opportunities	
Strategy	
Disclose the actual and potential impacts of climate- related risks and opportunities on the organization’s businesses, strategy, and financial planning where such information is material	Wolfspeed’s CDP Climate Change response*
a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term	
b) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning	
c) Describe the resilience of the organization’s strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario	
Risk Management	
Disclose how the organization identifies, assesses, and manages climate-related risks	Wolfspeed’s CDP Climate Change response*
a) Describe the organization’s processes for identifying and assessing climate-related risks	
b) Describe the organization’s processes for managing climate-related risks	
c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management	
Metrics and Targets	
Disclose the metrics and targets used to assess and manage relevant climate-related risks and opportunities where such information is material	Wolfspeed’s CDP Climate Change response*
a) Disclose the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process	
b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.	Energy and Greenhouse Gas Emissions Wolfspeed’s CDP Climate Change response*
c) Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets

SUSTAINABILITY DATA

Sustainability Data General Notes

Clicking on the titles of all graphs and charts throughout this report will direct you to the Sustainability Data section.

Unless otherwise noted in the Sustainability Data footnotes, data presented in this report is for all our global facilities and significant locations of operations refer to our owned manufacturing facilities located in the United States.

Wolfspeed completed the sale of Wolfspeed radio frequency business to MACOM at the end of the 2023 calendar year. It is reflected in data where applicable (including recalculation of previous years’ data where needed, not including RTP as it was exited mid-year 2025).

In a couple of instances there are slightly different reported numbers in the Sustainability Data section than in other sections of the report. This difference is due to rounding and is de minimis.

Sustainability Data Footnotes

- ^[1] The numbers reported include contingent workers assigned to Wolfspeed Inc. in a temporary capacity. These workers are not employees of Wolfspeed Inc. (excludes employees with no gender identified).

^[2] US employees are considered “at will” and are not bound by any employment contract. Therefore, none of our US employees are classified as “permanent.” The data provided is limited by employee self-disclosure and does not necessarily represent the entire employee population.

^[3] Data presented here is for our significant locations of operations and represents approximately 85.6% of our total number of employees in calendar year 2025.

^[4] Data presented here is for employees in our significant locations of operations, which represents approximately 92.8% of our total number of employees (temporary workers excluded) in calendar year 2025.

^[5] Data provided is limited by employee self-disclosure and does not necessarily represent the entire employee population.

^[6] Data presented here is based on full and part-time US employees and represents approximately 93.4% of global Wolfspeed employees. Employees terminated due to Divestiture or Reduction in Workforce are excluded.
- ^[7] Data presented here is for our significant locations of operations and our smaller United States locations, which represents approximately 91% of our total number of 2025 employees.

^[8] Recordable Work-Related Injury-Illness is a work-related injury or ill health that results in any of the following: death, days away from work, restricted work or transfer to another job, medical treatment beyond first aid, or loss of consciousness; or significant injury or ill health diagnosed by a physician or other licensed healthcare professional, even if it does not result in death, days away from work, restricted work or job transfer, medical treatment beyond first aid, or loss of consciousness.

^[9] Injury-Illness rates are calculated using 200,000 hours worked (Rate = cases/total hours worked * 200,000).

^[10] High-Consequence Recordable Work-Related Injury-Illness is a work-related injury or ill health that results in an injury from which the worker cannot, does not, or is not expected to recover fully to pre-injury health status within six months.

^[11] Contract Employee = Any worker who is not a Wolfspeed employee but whose day-to-day work instruction is controlled by Wolfspeed.

^[12] All energy usage reported is purchased from the local utilities’ energy grid. Our renewable/ carbon-free energy used at our facilities are based

on the energy mix from the local utility. We do not sell energy. Energy consumption is determined using monthly supplier invoices or estimated using square feet of building space where invoices are not available.

^[13] All **scope 1** emissions were calculated using methodologies and emission factors from the United States EPA Mandatory Greenhouse Gas Reporting Rule: Global warming potentials: 40 CFR 98, Table A-1 (IPCC AR5 - 100 year and IPCC AR6 - 100); Fuel usage emissions: 40 CFR 98 Subpart C and Electronics manufacturing emissions: 40 CFR 98 Subpart I. The gases included in the calculations are CO2, CH4, N2O, HFCs, PFCs, SF6, NF3, refrigerants and heat transfer fluids (HTFs). We do not emit biogenic CO2. Note: There is a small difference in the reporting of emissions from natural gas for our site in RTP, NC, USA, between the EPA GHG Report and our corporate GHG inventory due to allocation.

We used the EPA eGRID subregional emission factors to calculate **scope 2** emissions from the use of electricity at our Unites States facilities. For our facilities outside of the United States, International Energy Agency (IEA) emission factors were used. We used global warming potentials from the United States EPA Mandatory Greenhouse Gas Reporting Rule, 40 CFR 98, Table A-1 (IPCC AR5 - 100 year and IPCC AR6 - 100). We do not emit biogenic CO2.

Scope 3 emissions were calculated for all relevant categories. Sources of emission factors include EPA eGRID, International Energy Agency (IEA), EPA GHG Emission Factors Hub, EPA WARM, DEFRA, WIOD database). We used global warming potentials from the United States EPA Mandatory Greenhouse Gas Reporting Rule, 40 CFR 98, Table A-1 (IPCC AR4 – 100 year and IPCC AR6 - 100).

^[14] The values reported represent what our products sold will save over their estimated lifetimes. Energy usage and GHG emissions from our products were compared to their less efficient alternative products to derive energy use savings. Our Power products, made from silicon carbide, were compared to similar products made from silicon.

^[15] Hazardous air pollutants (HAP) are based on the United States EPA list of HAP. Air pollutants are classified as toxic air pollutants per the regulations applicable at each facility.

^[16] Water withdrawal data is either collected from meters, water utility bills or estimated using square feet of building space where invoices/ meters are not available. Water discharge data is either collected from meters or assumed equal to water withdrawal for sites where invoices/ meters are not available. Recycled water data is either collected from meters or estimated using system operational parameters when meters are not available. The recycled water is reused in our process. Wastewater is sent to local

Sustainability Data Footnotes (continued)

wastewater treatment facilities. Water consumed primarily refers to evaporation and may also include diversion to other disposal endpoints or human consumption. Water discharged meets local regulatory requirements for water quality. Large manufacturing sites have water storage capacity in tanks. Reservoirs are not used. Note: Overall consumed water for CY2025 in Siler City is negative because significant condensate was generated from conditioning the facility and was sent to sewer.

[17] For data prior to 2020: All of our global manufacturing facilities were assessed for water stress using the World Resources Institute Aqueduct Water Risk Atlas. Overall Water Risk identifies regions that have a higher exposure to water-related risks and represents an aggregated measure of all indicators from the individual water risk categories of Physical Risk Quantity, Physical Risk Quality and Regulatory & Reputational Risk:

- Low water stress indicates the facility(ies) scored 0 to 1 out of 5 for Overall Water Risk.
- Low to medium water stress indicates the facility(ies) scored 1 to 2 out of 5 for Overall Water Risk.
- Medium to high water stress indicates the facility(ies) scored 2 to 3 out of 5 for Overall Water Risk.
- High water stress indicates the facility(ies) scored 3 to 4 out of 5 for Overall Water Risk.
- Extremely high water stress indicates the facility(ies) scored 4 to 5 out of 5 for Overall Water Risk.

For 2020, 2021, 2022, 2023, and 2025 data: All of our global facilities were assessed for water stress using the World Resources Institute Aqueduct Water Risk Atlas. We consider areas with water stress to be those locations with the risk category “High (40-80%)” or “Extremely High (>80%)” for baseline water stress:

- Low water stress indicates the facility(ies) scored <10% for Water Stress.
- Low to medium water stress indicates the facility(ies) scored 10-20% for Water Stress.
- Medium to high water stress indicates the facility(ies) scored 20-40% for Water Stress.
- High water stress indicates the facility(ies) scored 40- 80% for Water Stress.
- Extremely high water stress indicates the facility(ies) scored >80% for Water Stress.

[18] We use various methods to collect and monitor waste-related data, including manifests, invoices, vendor reports, estimated weights based on container size, and spreadsheets. We determine whether a waste is hazardous or non-hazardous based on the applicable regulation where the facility is located (e.g., RCRA for our United States facilities). We report our waste numbers in pounds throughout this report. In 2025, we generated 1,467 metric tons of hazardous waste and 3,461 metric tons of non-hazardous waste (including solid waste). We do not import or export hazardous waste and do not ship hazardous waste internationally. All the hazardous waste reported in our **Waste Management** section is transported for treatment. We do not include waste treated for elementary neutralization onsite in our hazardous waste totals. Waste disposal method information is provided by our waste disposal vendors. Wastewater discharged to local Publicly Owned Treatment Works is not included in our non-hazardous waste totals.

INDEPENDENT ASSURANCE STATEMENT

Independent ESG Assurance Statement to Wolfspeed

Introduction & Objectives: Trinity Consultants, Inc. (Trinity) was engaged by Wolfspeed Inc. (Wolfspeed) to provide independent assurance for specified calendar year (CY) 2025 environmental, social, and governance (ESG) data presented in Wolfspeed’s 2026 Sustainability Report and 2026 CDP submittal. The overall objective of this process was to provide assurance to Wolfspeed’s stakeholders concerning the accuracy, completeness, reliability, and objectivity of the specified ESG information included in the Report. This Assurance Statement applies to the information included within the subject Scope of Work.

Scope of Work: Wolfspeed requested that Trinity perform limited assurance of the following specified ESG performance data for CY 2025 (January 1, 2025, to December 31, 2025) to determine whether they are fairly presented, in all material respects, in a manner consistent with the designated reporting criteria:

- Direct (Scope 1) greenhouse gas (GHG) emissions from stationary and mobile combustion and process sources (83,888 metric tons CO₂e)
- Indirect, location-based (Scope 2) GHG emissions from purchased electricity (133,668 metric tons CO₂e)
- Indirect, market-based (Scope 2) GHG emissions from purchased electricity (126,186 metric tons CO₂e)
- Indirect (Scope 3) emissions resulting from two of the 15 potential Scope 3 categories: fuel-and-energy related activity (62,423 metric tons CO₂e) and product use (196 million metric tons CO₂e)
- Total energy consumption (635,492 Megawatt Hours)
- Total water withdrawal, including third-party water withdrawal and rainwater withdrawal (472 million gallons)
- Total water recycled (162 million gallons)
- Total water discharged (396 million gallons)
- Total water consumption (76 million gallons)
- Total waste generated/disposed (10.9 million pounds)
 - Hazardous Waste (3.2 million pounds)
 - Non-Hazardous Waste (2.3 million pounds)
 - Solid Waste (5.3 million pounds)
 - Injury-illness rate (0.91)

The reported data was evaluated against Wolfspeed's internal GHG and sustainability reporting procedures, as well as requirements for reporting GHG emissions data to CDP.

Our procedures assessed the appropriateness and effectiveness of underlying corporate reporting processes, management controls, and systems used to develop, compile, evaluate and report the specified ESG data.

The boundary of the data included in this assurance is limited to the manufacturing and warehouse facilities, research & development (R&D) labs, and administrative offices under Wolfspeed operational control during the subject period. Text, descriptions, interpretations, or other written statements in the 2026 Sustainability Report and CDP submittal were not included in the scope of Trinity’s work.

Reporting Criteria: Wolfspeed has developed the data subject to this verification as documented in their corporate Sustainability Data Management Plan. This Plan incorporates specific definitions for each ESG performance indicator and the basis on which these data are compiled, calculated, and reported. External criteria utilized to develop these data included:

- The Greenhouse Gas Protocol, A Corporate Accounting and Reporting Standard, GHG Protocol Scope 2 Guidance, and Corporate Value Chain (Scope 3) Accounting and Reporting Standard.
- US EPA 40 CFR Part 98 Mandatory GHG Reporting Rule, Subpart I equations
- GRI Standards 2021, Global Sustainability Standards Board
- IPCC AR5 and AR6 (100-yr) Global Warming Potentials
- U.S. EPA eGRID 2025 (2023 data)
- UK DEFRA Greenhouse Gas Reporting Conversion Factors (2025)

Assurance Standard: Trinity’s work was conducted following our standard assurance methodology and approach for external verification of sustainability data, in part based on the International Standard on Assurance Engagements (ISAE) 3000, Assurance Engagements Other Than Audits or reviews of Historical Financial Information (2012), suitably adapted.

Trinity completed the GHG inventory verification in a manner consistent with CDP verification requirements, as well. Trinity reviewed the GHG Inventory and energy data to assess conformity with relevant sections of the ISO 14064 Part 3: Specification with guidance for the verification and validation of greenhouse gas statements, and The Greenhouse Gas Protocol, A Corporate Accounting and Reporting Standard, Revised Edition, WRI/WBCSD, March 2004.

Responsibilities: Wolfspeed management is solely responsible for the ESG performance data and its presentation in the 2026 CDP submittal and Sustainability Report. Trinity was not involved in the collection or development of the reported data or development of either report.

Trinity’s responsibility is to perform an assurance engagement to provide conclusions on the agreed Scope of Work based on the assurance activities performed, consistent with exercising our professional judgement.

Assurance Methodology: Trinity conducted the following activities during this assurance engagement:

- Interviewed key staff from Wolfspeed’s corporate headquarters in Durham, NC responsible for Wolfspeed's sustainability program, activities, and management systems for the specified GHG and ESG performance data.
- Ensured that Wolfspeed’s scope and boundaries reflected in the reported data are fair and accurate.
- Reviewed documentation and interviewed other relevant staff to understand and evaluate the processes, systems, and methodologies used to collect, compile, consolidate, evaluate, and report data for the specified GHG and ESG performance indicators.
- Reviewed Wolfspeed’s corporate GHG Inventory Management Plan and Sustainability Data Management Plan, including suitability of calculations, GWPs, and conversion and emission factors.
- Reviewed the corporate consolidation of data for specified ESG performance data and compared it to data submitted from a sample of the individual facilities owned by Wolfspeed.
- To meet CDP reporting and verification requirements, verification procedures were applied to a sample representing all the company’s enterprise-wide Scope 1 and Scope 2 GHG emissions (both location-based and market-based), as well specified categories of reported Scope 3 emissions representing more than 90% of the Scope 3 profile.
- Selected underlying facility source data on a test basis and conducted a desktop review of these sample data to confirm specified site data.
- Reviewed the presentation of the above performance data in the 2026 Sustainability Report to ensure consistency with our findings, and to address changes and corrections with Wolfspeed where necessary.

Trinity’s Opinion: Based on Trinity’s verification activities, nothing has come to our attention to indicate that the corporate CY 2025 data for the specified Scope 1, location-based Scope 2, market-based Scope 2, and selected Scope 3 GHG emissions, and ESG performance metrics listed under ‘Scope of Work’ and disclosed in the Wolfspeed 2026 Sustainability Report and 2026 CDP submittal are not fairly presented, in all material respects, in a manner consistent with the designated reporting criteria.

Trinity has concluded that Wolfspeed has implemented sufficient processes, systems, and controls for the accurate collection and analysis of activity data used to determine the reported data.

Trinity’s Observations: Trinity has provided Wolfspeed with a separate management report. Without affecting the conclusions presented above, we have the following observations:

- Wolfspeed leadership has shown a strong commitment to maintaining a quality GHG inventory and ESG data set for Sustainability reporting. This is evidenced by conducting periodic reviews of reported data for accuracy and providing adequate resources for data compilation and quantification.
- Wolfspeed has established a GHG Inventory Management Plan and Sustainability Data Management Plan to guide the development and reporting of data with a focus on energy, GHG emissions and selected ESG parameters. Wolfspeed continues to demonstrate improvement with these plans.

Limitations: Our work did not include visits or physical inspections of any of Wolfspeed’s operating facilities, and interaction with staff located at the Durham, NC headquarters occurred remotely.

Trinity’s approach to this verification was not intended to detect all weakness in management controls as described above. The verification was performed on corporate management controls on a sampling basis. Further, it should be noted that the reliability of GHG and ESG data may be subject to inherent uncertainties, based on the established methods used to measure or calculate the underlying information.

This Assurance Statement is only valid when it is published with the 2026 Sustainability Report to which it refers and disclosed through Wolfspeed’s 2026 CDP submittal and may only be reproduced in its entirety.

Statement of independence: Trinity is an independent professional services firm that specializes in environmental, health and safety, and sustainability compliance, risk, and performance management. We have developed and maintain a quality management system, certified to ISO 9001:2015. No member of the assurance team has a business relationship with Wolfspeed, its managers, or Directors other than for the purpose of verification of the subject GHG and sustainability data and reporting, or has had any involvement in writing the Report, data collection or validation, or the development or implementation of data systems. This verification has been conducted independently, and we believe that there has been no conflict of interest.

Rich Pandullo, MEM, CM
